

Unit 9: Rate of Reaction and Collision Theory

Lesson 9.1

Factors Affecting Reaction Rates

Introduction

When you forget to return milk inside the refrigerator, after a few days, you will observe that the milk has started to curdle. However, when the milk is kept in a cooler environment, the curdling process becomes slower. Cheese manufacturers intentionally add rennet to speed up the curdling process of milk to make cheese. The curdling of milk is an example of a chemical reaction that can occur at different rates when exposed to different conditions. Chemical reactions may happen very slowly, just like the formation of rust from iron, or they can happen very fast, as the reaction of sodium metal with water. Knowing the rate of a chemical reaction is useful, particularly in the industry. This knowledge can help in research and development of medicine, food processing, and others. In this lesson, you will learn about the rates of reaction and the factors that affect them.
