Channel Characterization and System Design in Wireless Communications Do-Sik Yoo, 2002 We introduce parameters called normalized mean square covariance NMSV normalized mean square correlation NMSR re-centered normalized mean square correlation RC NMSR and stochastic degree of freedom SDF to efficiently characterize the correlation properties of L2 stochastic processes We show that these parameters are very useful to characterize wireless communication channels In particular we show that there are very close relationships between the parameters and the performance of various wireless communication systems Due to such close relationship the parameters are very useful to evaluate the quality of wireless communication channels We show that the parameters are very effective in wireless communication system design In particular we can obtain direct relations between the quality of channel and the performance of various wireless communication systems Due to the fundamental nature of the parameters we believe that they will be very helpful in other branches of science and engineering in which stochastic modeling is useful

Improved Mathematical Models for Fading and Shadowing in Wireless Channels Seyed Ali Saberali, 2013 Signal shadowing and multipath fading are two challenging phenomena in wireless communications The goal of this thesis is to improve the statistical models and the mathematical tools required for description and analysis of some specific fading scenarios namely lognormal shadowing two wave with diffuse power fading and diffuse Nakagami m with line of sight fading For lognormal shadowing a novel method is proposed to derive approximations to the lognormal characteristic function For two wave with diffuse power fading new expressions are derived for its probability density function cumulative distribution function and moments Finally a novel fading model is introduced which combines a line of sight with a Nakagami m diffuse scatter The new fading model is justified and expressions are derived for its statistics The new fading distribution is compared to the Rice Nakagami m and two wave with diffuse power distributions Application of the results in performance analysis of wireless systems operating in Nakagami m with line of sight fading is investigated
