borders: exploring diverse roles of heterocyclic compounds in combatting infections and cancer Afzal Basha Shaik,Richie Bhandare,Mukhlesur Rahman,Kamal Dua,2025-04-01 There is an urgent need for the discovery of new drugs against infectious diseases and cancer Globally infectious diseases are prevalent with pathogens constantly evolving leading to a rise in drug resistant strains This necessitates the development of new antimicrobial agents capable of overcoming resistance Moreover the COVID 19 pandemic highlighted the critical need for rapid drug development against emerging infectious diseases Cancer a leading cause of death worldwide presents challenges due to its complexity and diversity and the unique genetic profiles of patients The American Cancer Society notes increasing cancer rates underscoring the need for more effective targeted therapies In this context heterocyclic compounds in natural and medicinal chemistry are promising for their structural diversity and reactivity showing potential in treating infections and cancer by targeting specific cell lines and pathways This Research Topic focuses on the advancements and applications of heterocyclic compounds emphasizing their significance in modern medicinal chemistry The goal is to delve into the multifaceted applications of heterocyclic compounds in addressing two of the most pressing health challenges infectious diseases and cancer The core issue this research addresses is the increasing resistance to traditional treatments in infectious diseases and the intricacies of cancer treatment complicated by its genetic diversity and adaptability To tackle these issues this Research Topic aims to gather and showcase cutting edge research on the isolation design synthesis and application of heterocyclic compounds Heterocyclic compounds are known for their structural diversity and unique biological properties offering promising avenues for developing novel therapeutics Recent advances in this field have demonstrated the potential of heterocyclic compounds to produce more targeted and effective treatments with fewer side effects By collating research on novel heterocyclic compounds their mechanisms of action and their clinical applications this Research Topic seeks to contribute to the development of next generation drugs It aims to foster a deeper understanding of how these compounds interact with

biological systems overcome resistance mechanisms in pathogens and target specific pathways in cancer cells The ultimate aim is to advance medicinal chemistry and pharmacology leading to novel treatments for infectious diseases and cancer This Research Topic aims to collect important advancements made in the field of medicinal and natural product chemistry including the isolation design synthesis and applications of potential heterocyclic compounds as potential anti infective and anticancer agents We welcome Original Research Review Mini Review and Perspective articles on themes including but not limited to Heterocyclic compounds with potential anti infective and anticancer properties Bioactivity guided isolation and characterization of heterocyclic secondary metabolites from natural sources with potential anti infective and anticancer properties Semi synthesis and characterization of novel heterocyclic compounds with significant anti infective and anticancer activity Design and synthesis of promising anti infective and anticancer lead molecules using medicinal synthetic and computational chemistry approaches
