Leveraging food systems to reduce poverty and malnutrition Raza, A and Soares, F., 2020-12-18 Even though substantial progress has been achieved worldwide in reducing both poverty and malnutrition much is yet to be done There are signs that the progress made in both dimensions has stalled in recent years Poor quality diets have become a major

driver for overweight and obesity and associated non communicable diseases such as diabetes heart diseases and some types of cancers Conflict and climate vulnerability have been identified as major obstacles to reaching Sustainable Development Goal targets related to malnutrition by 2030 In 2019 economic downturns and slowdowns hindered efforts even further More recently the COVID 19 crisis has imposed even harsher conditions to countries Poverty and malnutrition are inevitably linked and therefore addressing one can help address the other Given that most of the world s extremely poor people and stunted children live primarily in rural areas and rely mostly on agriculture the agriculture and food systems approach can offer an opportunity to reduce both poverty and malnutrition The food systems approach places equal emphasis on both the supply and demand dimensions that are critical for ensuring healthier diets and better nutrition for poor and vulnerable groups This special issue of Policy in Focus is dedicated to answering a crucial question How can a food systems approach be used to design and implement policies and investments that reach those most vulnerable to poverty hunger malnutrition and suboptimal diets We hope that the contributions contained in this volume by leading academics and development practitioners exploring the linkages between nutrition food systems and poverty can help stakeholders and policymakers make inroads towards the promotion of food and nutrition security and the reduction of rural poverty

Gender Intentional Crop Breeding: From Integration To Institutional Innovation Hale Tufan,Vivian Polar, Jacqueline Ashby,2025-06-02 Significant progress in agricultural technology development has remained persistently blind to social and gender inequalities Creating agricultural research ecosystems and institutions that address gender inequality requires structural and systemic analysis One of the major areas of investment in agricultural innovation is plant breeding Integrating social welfare objectives in plant breeding is a good starting point to catalyze progress towards gender equality objectives in research for development at a global scale yet devoid of structural change these efforts risk falling short of expectations Intentionally addressing gender in plant breeding research can reshape the technical options goals and intended impact of breeding programs Improving the benefits delivered to rural women through plant breeding can be achieved through new methods and learning critically analyzing systematic barriers to equitable plant breeding research and documenting experiences that demonstrate positive change There is a wide diversity of global experiences where gender research has analyzed how gender differences influence needs preferences and potential benefits from crop varieties and crop specific traits Some of these experiences were able to successfully integrate results and learning from gender research into breeding processes and decisions while some have failed to demonstrate concrete actionable results in breeding programs
