Economics And Management Of Climate Change Risks Mitigation And Adaptation:

Economics and Management of Climate Change Bernd Hansjürgens, Ralf Antes, 2008-07-01 Climate change is one of the biggest challenges for mankind. Although there is increasing evidence that climate change is already occurring, there is neither sufficient knowledge as to what extent climate change poses risks to societies and companies nor about adequate strategies to cope with these risks. Bringing together an international group of scholars from environmental economics, political science, and business, this book describes, analyses, and evaluates climate change risks and responses of societies and companies. The book contributes to the question of how climate change can be mitigated by discussing efficient and effective design of mitigation measures in particular emissions trading and clean development mechanism (CDM). Placing special emphasis on the impact of climate change risks on business, the book investigates in which way selected sectors of the economy are affected and what measures they can undertake to adapt to climate change risks. **Climate Change Risks and Adaptation Linking Policy and Economics** OECD, 2015-07-07 Building on the experience of OECD countries, this report sets out how the latest economic evidence and tools can enable better policy making for adaptation. **Routledge Handbook of the Economics of Climate Change Adaptation** Anil Markandya, Ibon Galarraga, Elisa Sainz de Murieta, 2014-01-03 Climate change is one of the greatest challenges facing humankind, owing to the great uncertainty regarding future impacts which affect all regions and many ecosystems. Many publications deal with economic issues relating to mitigation policies, but the economics of adaptation to climate change has received comparatively little attention. However, this area is critical and a central pillar of any adaptation strategy or plan and is the economic dimension which therefore merits the increase in attention it is receiving. This book deals with the difficulties that face the economics of adaptation. Critical issues include uncertainty, baselines, reversibility, flexibility, and adaptive management; distributional impacts; discount rates and time horizons; mixing monetary and non-monetary evaluations; and limits to the use of cost-benefit analysis; economy-wide impacts and cross-sectoral linkages. All of these are addressed in the book from the perspective of economics of adaptation. Other dimensions of adaptation are also included, such as the role of low and middle income countries, technology, and the impacts of extreme events. This timely book will prove essential reading for international researchers and policy makers in the fields of natural resources, environmental economics, and climate change. *Elgar Encyclopedia of Water Policy, Economics and Management* Phoebe Koundouri, Angelos Alamanos, 2024-01-18 This authoritative Encyclopedia provides an innovative approach to theory, reviews applications, and examples relevant to the basic concepts of water science and water management issues in order to facilitate better interdisciplinary cooperation. **Climate Change 2014 - Impacts, Adaptation and Vulnerability: Global and Sectoral Aspects** Christopher B. Climate Change and Disaster Risk Management

Walter Leal Filho,2012-08-10 There has been some degree of reluctance in the past to consider disaster risk management within the mainstream of adaptation to climate variability and climate change However there is now wide recognition of the need to incorporate disaster risk management concerns in dealing with such phenomena There is also a growing awareness of the necessity for a multi sectoral approach in managing the effects of climate variability and climate change since this can lead to a significant reduction of risk This book presents the latest findings from scientific research on climate variation climate change and their links with disaster risk management It showcases projects and other initiatives in this field that are being undertaken in both industrialised and developing countries by universities and scientific institutions government bodies national and international agencies NGOs and other stakeholders Finally it discusses current and future challenges identifying opportunities and highlighting the still unrealised potential for promoting better understanding of the connections between climate variation climate change and disaster risk management worldwide
