**Origin of Humankind** Sam Kneller, Humankind At the same time it's best friend and its worst enemy We're capable of the Declaration of Human Rights and Genocide sending a man to the moon and polluting our oceans Why are we inhabited by such extreme objectives What is the origin of such a paradoxical humankind Humans can be angels Mother Teresa Schindler and Dr Jekyll The Bible calls this righteousness Humans can be demons Saddam Hussein Stalin and Mr Hyde The Bible calls this sin We want humans to be loving kind peaceful and happy But Are we human angels or human demons We need to figure out what makes humans tick Are we subject to our consciousness and mind pulsations Do we have any choice in the matter The clock is ticking When it stops will it be heaven or hell I commend anyone who takes measures to

look beyond the surface meaning of scriptures since there s so much hidden in Biblical text People who take it at surface value often miss precious gems of wisdom D Robinson This commentary on Genesis 2 is an eye opening solution to the human paradox Learn the origin of consciousness and the mind Join all the dots as we delve into the Biblical Hebrew the original language of the Bible Read the clear answers to these pressing questions in Origin of Humankind available now

**The Origins of Creativity**

Edward O. Wilson, 2017-10-03 Brimming with ideas The Origins of Creativity approaches creativity scientifically but sensitively feeling its roots without pulling them out Economist In a stirring exploration of human nature recalling his foundational work Consilience Edward O Wilson offers a luminous Kirkus Reviews reflection on the humanities and their integral relationship to science Both endeavors Wilson argues have their roots in human creativity the defining trait of our species By studying fields as diverse as paleontology evolution and neurobiology Wilson demonstrates that creative expression began not 10 000 years ago as we have long assumed but more than 100 000 years ago in the Paleolithic Age A provocative investigation into what it means to be human The Origins of Creativity reveals how the humanities have played an unexamined role in defining our species With the eloquence optimism and pioneering inquiry we have come to expect from our leading biologist Wilson proposes a transformational Third Enlightenment in which the blending of science and humanities will enable a deeper understanding of our human condition and how it ultimately originated

*Landscape of the Mind* John F. Hoffecker, 2011 In *Landscape of the Mind* John F Hoffecker explores the origin and growth of the human mind drawing on archaeology history and the fossil record He suggests that as an indirect result of bipedal locomotion early humans developed a feedback relationship among their hands brains and tools that evolved into the capacity to externalize thoughts in the form of shaped stone objects When anatomically modern humans evolved a parallel capacity to externalize thoughts as symbolic language individual brains within social groups became integrated into a neocortical Internet or super brain giving birth to the mind Noting that archaeological traces of symbolism coincide with evidence of the ability to generate novel technology Hoffecker contends that human creativity as well as higher order consciousness is a product of the superbrain He equates the subsequent growth of the mind with human history which began in Africa more than 50 000 years ago As anatomically modern humans spread across the globe adapting to a variety of climates and habitats they redesigned themselves technologically and created alternative realities through tools language and art Hoffecker connects the rise of civilization to a hierarchical reorganization of the super brain triggered by explosive population growth Subsequent human history reflects to varying degrees the suppression of the mind s creative powers by the rigid hierarchies of nationstates and empires constraining the further accumulation of knowledge The modern world emerged after 1200 from the fragments of the Roman Empire whose collapse had eliminated a central authority that could thwart innovation Hoffecker concludes with
