The first edition of Search Methodologies Introductory Tutorials in Optimization and Decision Support Techniques was originally put together to offer a basic introduction to the various search and optimization techniques that students might need to use during their research and this new edition continues this tradition Search Methodologies has been expanded and brought completely up to date including new chapters covering scatter search GRASP and very large neighborhood search The chapter authors are drawn from across Computer Science and Operations Research and include some of the world's leading authorities in their field The book provides useful guidelines for implementing the methods and frameworks described and offers valuable tutorials to students and researchers in the field As I embarked on the pleasant journey of reading through the chapters of this book I became convinced that this is one of the best sources of introductory material on the search methodologies topic to be found The book's subtitle Introductory Tutorials in Optimization and Decision Support Techniques aptly describes its aim and the editors and contributors to this volume have achieved this aim with remarkable success The chapters in this book are exemplary in giving useful guidelines for implementing the methods and frameworks described Fred Glover Leeds School of Business University of Colorado Boulder USA The book aims to present a series of well written tutorials by the leading experts in their fields Moreover it does this by covering practically the whole possible range of topics in the discipline It enables students and practitioners to study and appreciate the beauty and the power of some of the computational search techniques that are able to effectively navigate through search spaces that are sometimes inconceivably large I am convinced that this second edition will build on the success of the first edition and that it will prove to be just as popular Jacek Blazewicz Institute of Computing Science Poznan University of Technology and Institute of Bioorganic Chemistry Polish Academy of Sciences *Learning and Intelligent Optimization* Christian Blum, Roberto Battiti, 2010-07-07 LION 4 the 4th International Conference on Learning and Intelligent Optimization was held during January 18-22 in Venice Italy This meeting which continues the successful series of LION conferences was aimed at exploring the intersections and uncharted territories between machine learning artificial intelligence mathematical programming and algorithms for hard optimization problems The main purpose of the event was to bring together experts from these areas to discuss new ideas and methods challenges and opportunities in various application areas general trends and specific developments Despite the economical crisis in 2009 which visibly affected the submission numbers of many conferences and workshops we received an impressive number of 87 submissions As in previous years we offered three different paper categories for submission 1 regular papers on original and unpublished work 2 short paper on original and unpublished work and 3 works for oral presentation only Accepted papers from the first two categories are published in the proceedings From the 87 submissions that were received 57 fell into the first category 22 into the second one and 8 into the last one After a thorough

reviewing process we accepted 19 regular papers which amounts to an acceptance rate of 33% and 11 short papers for publication in the proceedings Additionally nine regular papers were accepted as short papers and all eight submissions from the third category were accepted for presentation

Variation-Aware Analog Structural Synthesis Trent McConaghy, Pieter Palmers, Gao Peng, Michiel Steyaert, Georges Gielen, 2009-07-13 This book describes new tools for front end analog designers starting with global variation aware sizing and extending to novel variation aware topology design The tools aid design through automation but more importantly they also aid designer insight through automation We now describe four design tasks each more general than the previous and how this book contributes design aids and insight aids to each The first designer task targeted is global robust sizing This task is supported by a design tool that does automated globally reliable variation aware sizing SANGRIA and an insight aiding tool that extracts designer interpretable whitebox models that relate sizings to circuit performance CAFFEINE SANGRIA searches on several levels of problem difficulty simultaneously from lower cheap to evaluate exploration layers to higher full evaluation exploitation layers structural homotopy SANGRIA makes maximal use of circuit simulations by performing scalable data mining on simulation results to choose new candidate designs CAFFEINE accomplishes its task by treating function induction as a tree search problem It constrains its tree search space via a canonical functional form grammar and searches the space with grammatically constrained genetic programming The second designer task is topology selection topology design Topology selection tools must consider a broad variety of topologies such that an appropriate topology is selected must easily adapt to new semiconductor process nodes and readily incorporate new topologies Topology design tools must allow designers to creatively explore new topology ideas as rapidly as possible
