Application Integration Bernard Manouvrier, Laurent Menard, 2010-01-05. Application integration assembles methods and tools for organizing exchanges between applications and intra and inter enterprise business processes. A strategic tool for enterprises, it introduces genuine reactivity into information systems facing business changes and as a result provides a significant edge in optimizing costs. This book analyzes various aspects of application integration, providing a guide to the alphabet soup behind EAI, A2A, B2B, BAM, BPM, ESB and SOA. It addresses the problems of choosing between the application integration solutions and deploying them successfully. It supplies guidelines for avoiding common errors, exploring the differences between received wisdom and the facts on the ground. The overview of IT urbanization will help introduce English speaking audiences to a powerful approach to information system flexibility developed in France. A key chapter approaches the analysis and interoperation of service levels in integration projects, while the discussion on deployment methodologies and ROI calculation anchors the theory in the real world. Application Integration, EAI, B2B, BPM and SOA relies on concrete examples and genuine experiences to demonstrate what works and what doesn't in this challenging, topical and important IT domain.
