# Precipitation Experiment

This experiment will show you how precipitation works by making rain in a jar!

## You will need:

- 1 Jar
- 1 Plate
- Hot water
- Ice cubes

## Instructions

1. Boil some hot water
2. Fill the jar about  $\frac{3}{4}$  of the way up the jar
3. Put a plate over the jar
4. Add approximately 2 ice cubes
5. Place a few seconds on the plate
6. Watch the rain in the jar!

## Explanation

How we want to create water droplets or "rain" in the jar we need to first have a source of heat. The hot water warms the water in the jar, and that is evaporating the water. When we place the plate on top of the jar we are trapping the heat in the jar. Once the heat is trapped and we trapped when the hot and cold air meet this is where the rain comes in. The cold air from the ice warms the moisture and then forms the rain!
