Deep Learning for Natural Language Processing Mihai Surdeanu, Marco Antonio Valenzuela-Escárcega, 2024-02-08

Deep Learning is becoming increasingly important in a technology dominated world. However, the building of computational models that accurately represent linguistic structures is complex as it involves an in-depth knowledge of neural networks and the understanding of advanced mathematical concepts such as calculus and statistics. This book makes these complexities accessible to those from a humanities and social sciences background by providing a clear introduction to deep learning for natural language processing. It covers both theoretical and practical aspects and assumes minimal knowledge of machine learning, explaining the theory behind natural language in an easy-to-read way. It includes pseudo code for the simpler algorithms discussed and actual Python code for the more complicated architectures using modern deep learning libraries such as PyTorch and Hugging Face. Providing the necessary theoretical foundation and practical tools, this book will enable readers to immediately begin building real-world practical natural language processing systems. **Cybernetics Abstracts**
