Fixed Effects Regression Methods for Longitudinal Data Using SAS Paul Allison, 2014 Fixed Effects Regression Methods for Longitudinal Data Using SAS written by Paul Allison is an invaluable resource for all researchers interested in adding fixed effects regression methods to their tool kit of statistical techniques First introduced by economists fixed effects methods are gaining widespread use throughout the social sciences Designed to eliminate major biases from regression models with multiple observations usually longitudinal for each subject usually a person fixed effects methods essentially offer control for all stable characteristics of the subjects even characteristics that are difficult or impossible to measure This straightforward and thorough text shows you how to estimate fixed effects models with several SAS procedures that are appropriate for different kinds of outcome variables The theoretical background of each model is explained and the models are then illustrated with detailed examples using real data The book contains thorough discussions of the following uses of SAS procedures PROC GLM for estimating fixed effects linear models for quantitative outcomes PROC LOGISTIC for estimating fixed effects logistic regression models PROC PHREG for estimating fixed effects Cox regression models for repeated event data PROC GENMOD for estimating fixed effects Poisson regression models for count data and PROC CALIS for estimating fixed effects structural equation models To gain the most benefit from this book readers should be familiar with multiple linear regression have practical experience using multiple regression on real data and be comfortable interpreting the output from a regression analysis An understanding of logistic regression and Poisson regression is a plus Some experience with SAS is helpful but not required This book is part of the SAS Press program

Handbook of Causal Analysis for Social Research Stephen L. Morgan, 2013-04-22 What constitutes a causal explanation and must an explanation be causal What warrants a causal inference as opposed to a descriptive regularity What techniques are available to detect when causal effects are present and when can these techniques be used to identify the relative importance of these effects What complications do the interactions of individuals create for these techniques When can mixed methods of analysis be used to deepen causal accounts Must causal claims include generative mechanisms and how effective are empirical methods designed to discover them The Handbook of Causal Analysis for Social Research tackles these questions with nineteen chapters from leading scholars in sociology statistics public health computer science and human development

The SAGE Handbook of Quantitative Methods in Psychology Roger E Millsap,Alberto Maydeu-Olivares,2009-07-23 I often wonder to myself whether the field needs another book handbook or encyclopedia on this topic In this case I think that the answer is truly yes The handbook is well focused on important issues in the field and the chapters are written by recognized authorities in their fields The book should appeal to anyone who wants an understanding of important topics that frequently go uncovered in graduate education in psychology David C Howell Professor Emeritus University of Vermont Quantitative psychology is arguably one of the oldest disciplines within the field of psychology and nearly all psychologists are exposed to quantitative psychology in some form While textbooks in statistics research methods and psychological measurement exist none offer a unified treatment of quantitative psychology The SAGE Handbook of Quantitative Methods in Psychology does just that Each chapter covers a methodological topic with equal attention paid to established theory and the challenges facing methodologists as they address new research questions using that particular methodology The reader will come away from each chapter with a greater understanding of the methodology being addressed as well as an understanding of the directions for future developments within that methodological area Drawing on a global scholarship the Handbook is divided into seven parts Part One Design and Inference addresses issues in the inference of causal relations from experimental and non experimental research along with the design of true experiments and quasi experiments and the problem of missing data due to various influences such as attrition or non compliance Part Two Measurement Theory begins with a chapter on classical test theory followed by the common factor analysis model as a model for psychological measurement The models for continuous latent variables in item response theory are covered next followed by a chapter on discrete latent variable models as represented in latent class analysis Part Three Scaling Methods covers metric and non metric scaling methods as developed in multidimensional scaling followed by consideration of the scaling of discrete measures as found in dual scaling and correspondence analysis Models for preference data such as those found in random utility theory are covered next Part Four Data Analysis includes chapters on regression models categorical data analysis multilevel or hierarchical models resampling methods robust data analysis meta analysis Bayesian data analysis and cluster analysis Part Five Structural Equation Models addresses topics in general structural equation modeling nonlinear structural equation models mixture models and multilevel structural equation models Part Six Longitudinal Models covers the analysis of longitudinal data via mixed modeling time series analysis and event history analysis Part Seven Specialized Models covers specific topics including the analysis of neuro imaging data and functional data analysis
