

## Online Lab: Electric Fields

### General Directions:

- Go to the Phet site and download "electric charges and fields"  
<https://phet.colorado.edu/en/simulation/charges-and-fields>
- Select "grid", "Show e-field", and "show numbers" in the right box.

### Part A: comparing electric fields around + and - charges

- Grab a  $1\text{nC}$  charge from the basket and place it in the field.
- Describe how the vector arrows arrange themselves near the charge. Draw simple sketch to show this.

The vector arrows near the charge face outward.

- Put the  $1\text{nC}$  charge back and grab a  $-1\text{nC}$  charge and repeat the process. Draw the sketch here.

The vector arrows near the charge face inward.

- Place 2 more  $-1\text{nC}$  charges on top of the first one. What happens to the arrows? What do you think that means?

The circumference of the arrows expands further outward. I would assume that this happens because there are more negative charges therefore causing for a stronger negative field.

### Part B: using a test charge

- Grab a test charge from the basket and place it about 10 boxes from the negative charges. An E-field arrow appears. What is the direction of the arrow? Towards the charges? Away from the charges?

The direction of the E-field arrow is toward the charges.

- Clear away the negative charges and replace them with a positive charge. Bring in a test charge and put it 10 boxes away. What is the direction of the arrow?

The charge is now facing away from the arrow.

- From these two experiments, what is the sign of the charge of the test charge? Support your answer.
