Modeling in Ecology and Epidemiology Md. Shahidul Islam, Md. Kamrujjaman, Uttam Ghosh, 2024-10-23 Nature is filled with biotic organisms bacteria insects plants animals etc and B biotic elements of the environment air soil and water The life cycle of biotic elements is entirely dependent on the abiotic elements Pathogens like viruses bacteria or other infectious agents can cause diseases in living creatures The pathogens are capable of causing infectious disease directly or they can also spread through the other multiple species known as the Vector Zoonosis is an infectious disease that has jumped from non human animals to humans Zoonotic pathogens may be bacterial viral or parasitic involve unconventional agents and can spread to humans through direct contact

with food water or the environment Currently highly infectious human populations of diseases include HIV SARS CoV 2 Covid 19 H1N1 flu swine flu Dengue Vector borne and so forth Another essential feature is the pollutant of the environment like the pesticide used for agricultural purposes and oil in the seawater that spread among the animals through the food Therefore it is crucial to study infectious disease dynamics in ecological systems and human populations **Modeling Dynamic**

Biological Systems Bruce Hannon,Matthias Ruth,2014-07-05 Many biologists and ecologists have developed models that find widespread use in theoretical investigations and in applications to organism behavior disease control population and metapopulation theory ecosystem dynamics and environmental management This book captures and extends the process of model development by concentrating on the dynamic aspects of these processes and by providing the tools such that virtually anyone with basic knowledge in the Life Sciences can develop meaningful dynamic models Examples of the systems modeled in the book range from models of cell development the beating heart the growth and spread of insects spatial competition and extinction to the spread and control of epidemics including the conditions for the development of chaos Key features easy to learn and easy to use software examples from many subdisciplines of biology covering models of cells organisms populations and metapopulations no prior computer or programming experience required Key benefits learn how to develop modeling skills and system thinking on your own rather than use models developed by others be able to easily run models under alternative assumptions and investigate the implications of these assumptions for the dynamics of the biological system being modeled develop skills to assess the dynamics of biological systems **Introduction to Insect Pest**
