Networks, Topology and Dynamics Ahmad K. Naimzada, Silvana Stefani, Anna Torriero, 2008-11-14 There is convergent consensus among scientists that many social economic and nancial phenomena can be described by a network of agents and their inter tions Surprisingly even though the application elds are quite different those n works often show a common behaviour Thus their topological properties can give useful insights on how the network is structured which are the most important nodes agents how the network reacts to new arrivals Moreover the network once included into a dynamic context helps to model many phenomena Among the t ics in which topology and dynamics are the essential tools we will focus on the diffusion of technologies and fads the rise of industrial districts the evolution of nancial markets cooperation and competition information ows centrality and prestige The volume including recent contributions to the eld of network modelling is based on the communications presented at NET 2006 Verbania Italy and NET 2007 Urbino Italy offers a wide range of recent advances both theoretical and methodological that will interest academics as well as practitioners Theory and applications are nicely integrated theoretical papers deal with graph theory game theory coalitions dynamics consumer behavior segregation models and new contributions to the above mentioned area The applications cover a wide range airline transportation nancial markets work team organization labour and credit market *Discrete Mathematics for Computing*

Andrew Vince, Claire Morris, 1990 This text is suitable for an introductory course in the mathematics related to computing generally referred to as discrete mathematics Topics covered include set theory logic and methods of proof graphs digraphs and trees number systems and matrix algebra and an introduction to binary codes Throughout the book the interrelations between the mathematical structures and their representations is stressed and use is made of action diagrams as a language independent means of presenting algorithmic processes Readers who work through this text will acquire the mathematical knowledge and approach to problem solving required by introductory computing courses and a sound bases from which to pursue the subject further **Mathematical Modeling using Differential Equations, and Network Theory** Ioannis
