Environmental Change And Food Security In China Advances In Global Change Research:

Environmental Change and Food Security in China Jenifer Huang McBeath, Jerry McBeath, 2010-03-25 Abstract This chapter defines food security as the condition reached when a nation's population has access to sufficient safe and nutritious food to meet its dietary needs and food preferences. It stresses China's importance to global food security because of its population size. The chapter introduces the contents of the volume and then treats briefly food security in ancient and dynastic 211 bc 1912 China. It examines environmental stressors such as population growth, natural disasters, and insect pests, as well as imperial responses, for example, irrigation, flood control, storage, and transportation systems. The chapter also briefly introduces the Republican era 1912 1949 and compares environmental stressors and government responses then to those of the imperial period. Keywords: Food system, Food security, Food production, regions, Environmental stressors, Population growth, Natural disasters, Insect pests, and Plant diseases, Deforestation, Climate change, Irrigation systems, Flood control, Grand Canal. 1.1 The Problem of Food Security and Environmental Change Food is the material basis to human survival and in each nation state providing a system for the development, production, and distribution of food and its security is a primary national objective. Many forces have influenced the food security of peoples since ancient times with particular challenges from natural disasters, floods, famines, drought, and pestilence, and growing populations globally.

Environmental Change and Food Security in China, 2008 Climate Change and Human Development Hannah Reid, 2014-07-10 Whilst the world's poor are clearly hit hardest by climate change impacts, so too do they hold many of the solutions for how best to cope with its impacts and at times reduce greenhouse gas emissions to zero. In this wide-ranging book, Hannah Reid offers a rich compendium of real-life scenarios and brings home the realities of how poor people are suffering from and coping with climate change impacts today. Drawing on case studies gathered by the UP in Smoke group, a powerful coalition of global environment and development organizations including Greenpeace, Oxfam, Practical Action, and the WWF, this book provides new models for human development in a climate change constrained future, as well as positive solutions to tackling climate change at the macro level with proposals from luminaries such as Professors Wangari Maathai, Manfred Max Neef, and Jayati Ghosh.

Climate Change and Global Health Colin D. Butler, Kerry Higgs, 2024-07-30 There is increasing understanding that climate change will have profound, mostly harmful effects on human health. In this authoritative book, international experts examine long-recognized areas of health concern for populations vulnerable to climate change, describing effects that are both direct, such as heat waves, and indirect, such as via vector-borne diseases. This lively yet scholarly resource explores all these issues, finishing with a practical discussion of avenues to reform. As Mary Robinson, former UN High Commissioner for Human Rights, states in the foreword, Climate change interacts with many undesirable aspects of human behaviour, including inequality, racism, and other manifestations of injustice. Climate change policies as practised by most countries in the global North not only interact with these long-standing forms of injustice but exemplify a new form of startling magnitude.
