Dispersal Ecology And Evolution:

Dispersal Ecology and Evolution Jean Clobert, 2012-09-27 Provides an overview of the fast expanding field of dispersal ecology The causes mechanisms and consequences of dispersal at the individual population species and community levels are all considered

Dispersal Ecology and Evolution Jean Clobert, Michel Baguette, 2012 Now that so many ecosystems face rapid and major environmental change the ability of species to respond to these changes by dispersing or moving between different patches of habitat can be crucial to ensuring their survival Understanding dispersal has become key to understanding how populations may persist Dispersal Ecology and Evolution provides a timely and wide ranging overview of the fast expanding field of dispersal ecology incorporating the very latest research The causes mechanisms and consequences of dispersal at the individual population species and community levels are considered Perspectives and insights are offered from the fields of evolution behavioural ecology conservation biology and genetics Throughout the book theoretical approaches are combined with empirical data and care has been taken to include examples from as wide a range of species as possible both plant and animal

Dispersal Ecology British Ecological Society. Symposium, 2002-08 Dispersal has become central to many questions in theoretical and applied ecology in recent years In this volume a team of leading ecologists aim to provide the advanced student and researcher with a comprehensive review of dispersal and its implications for modern ecology

Seed Dispersal and Frugivory Douglas John Levey, Wesley R. Silva, Mauro Galetti, 2002 This book provides information on the historical and theoretical perspectives of biodiversity and ecology in tropical forests plant and animal behaviour towards seed dispersal and plant animal interactions within forest communities consequences of seed dispersal and conservation biodiversity and management

Organisms on the Move, 2010 *Ecology and Evolution of Dispersal in Theoretical and Empirical Systems* Curtis Allen Smith, 2006 Model of otter spread We use a stage structured integrodifference matrix model to test several hypotheses regarding the large disparity in spread rates between the northern and southern subpopulations of California sea otters from 1938 1972 We show that minor differences in adult survival rates can account for the disparity and that even smaller differences are required if the survival rates differ proportionally across all the life stages We argue that many of the present estimates for otter survival span intervals wide enough to account for the different spread rates especially if advection plays at least a minor role in otter movement

Life History Evolution Michal Segoli, Eric Wajnberg, 2025-03-10 Provides a timely and authoritative account of Life History Evolution by a multidisciplinary team of scholars and researchers from around the world Life History Evolution Traits Interactions and Applications presents a cutting edge synthesis of the mechanisms driving life history strategies that span the breadth of taxa from bacteria to humans Integrating classical and contemporary perspectives this comprehensive volume addresses how organisms evolve traits in response to diverse ecological pressures Editors Michal Segoli and Eric Wajnberg bring together leading experts to explore

the intersection of evolutionary biology ecology and applied research focusing on the evolving complexity of life history traits and their implications In depth yet accessible chapters cover a broad spectrum of life history traits from classical traits of lifespan and reproduction to more complex interactions like social behaviour predator prey dynamics and human induced evolutionary processes The contributing authors explain essential concepts identify critical knowledge gaps discuss future research directions and demonstrate the relevance of life history evolution in addressing climate change species invasion pollution and more Providing a well balanced understanding of life history traits and their implications Life History Evolution Incorporates recent advances in evolutionary theory including eco evolutionary feedback loops and anthropogenic impacts Offers diverse perspectives and original research from leading experts in fields such as evolutionary biology ecology entomology zoology agriculture and veterinary medicine Discusses life history evolution in the context of co evolved interactions such as predator prey parasite host plant herbivore and endosymbiont host relationships Provides an overview of the foundational theory recent developments and current thinking in the field Features numerous case studies that highlight real world applications in biological control wildlife management climate change adaptation and others Revealing how life history traits shape the evolutionary strategies of organisms Life History Evolution Traits Interactions and Applications is an essential resource for undergraduate and graduate students researchers industry professionals and policymakers in ecological science It is an ideal textbook for courses in evolutionary ecology evolutionary biology conservation biology environmental science and environmental management The evolution and ecology of dispersal Thomas Hovestadt,2005

Invasion Dynamics Cang Hui,David M. Richardson,2017-01-26 Humans have moved organisms around the world for centuries but it is only relatively recently that invasion ecology has grown into a mainstream research field This book examines both the spread and impact dynamics of invasive species placing the science of invasion biology on a new more rigorous theoretical footing and proposing a concept of adaptive networks as the foundation for future research Biological invasions are considered not as simple actions of invaders and reactions of invaded ecosystems but as co evolving complex adaptive systems with emergent features of network complexity and invasibility Invasion Dynamics focuses on the ecology of invasive species and their impacts in recipient social ecological systems It discusses not only key advances and challenges within the traditional domain of invasion ecology but introduces approaches concepts and insights from many other disciplines such as complexity science systems science and ecology more broadly It will be of great value to invasion biologists analyzing spread and or impact dynamics as well as other ecologists interested in spread processes or habitat management **Frugivory and seed dispersal: ecological and evolutionary aspects** T.H. Fleming,Alejandro Estrada,2012-12-06 Any scientific discipline needs a theoretical framework to guide its development and to sharpen the questions its researchers pursue In biology evolution is the grand theoretical framework and an his torical perspective is necessary to understand present day biological conditions In its formative years the modern study of the fruit frugivore

mutualism was guided by the specialist generalist paradigm developed by D Snow D McKey and H Howe Howe reviews the current status of this evolutionary paradigm and points out that it has been dismissed by many workers before being adequately tested This is because ecologists working with the tropical plants and frugivorous birds for which the paradigm was originally developed rarely measure the seed dispersal effectiveness of different disperser species He indicates that this paradigm still has heuristic value and suggests that several additional ecological paradigms including the concept of keystone species of plants and frugivores and the role that frugivores play in density dependent mortality in tropical trees are worth studying The concept of seed dispersal quality has been central to discussions of fruit frugivore coevolution Schupp thoroughly reviews data bearing on this concept constructs a hierarchical framework for viewing disperser effectiveness and points out that disperser effectiveness depends on both the quantity and quality of seed dispersal Effectiveness in turn affects both evolutionary and ecological relationships between dispersers and their food plants

Why Birds Matter Çagan H. Sekercioglu, Daniel G. Wenny, Christopher J. Whelan, 2016-08-24 Explore the role of birds in such important ecological dynamics as scavenging nutrient cycling food chains and plant animal interactions all seen through the lens of human well being The contributors show that quantifying avian ecosystem services is crucial when formulating contemporary conservation strategies Back cover

Evolution and Ecology of Migration and Dispersal Jan Bengtsson, 1982

Dispersal Etienne Danchin, James D. Nichols, Andre A. Dhondt, 2001 Habitat fragmentation and global climate change are the two major environmental threats to the persistence of species and ecosystems The probability of a

species surviving such changes is strongly dependent on its ability to track shifts in the environmental either by moving between patches of habitat or by rapidly adapting to local condition These solutions to problems posed by environmental change depend on dispersal propensity motivating our desire to better understand this important behavior This book is a comprehensive overview of the new developments in the study of dispersal and the state of the art research on the evolution of this trait The causes mechanisms and consequences of dispersal at the individual population and species levels are considered The promise of new techniques and models for studying dispersal drawn from molecular biology and demography is explored Perspectives on the study of dispersal are offered from evolution conservation biology and genetics Throughout the book theoretical approaches are combined with empirical data and examples are included from as wide a range of species as possible
