Types of Data

Quantitative - numerical data that can be measured

Qualitative - non-numerical data that describes qualities or characteristics

Primary - data collected first-hand from the source

Secondary - data collected from existing sources

Discrete - data that can only take specific values (e.g., number of children)

Continuous - data that can take any value within a range (e.g., height)

Population - the entire group of individuals being studied

Sample - a subset of the population

Sampling - the process of selecting a sample from a population

Random Sampling - every member of the population has an equal chance of being selected

Systematic Sampling - selecting every kth member of the population

Stratified Sampling - dividing the population into strata and sampling from each

Cluster Sampling - dividing the population into clusters and sampling from one or more clusters

Measures of Central Tendency

Mean - the average of a set of values

Median - the middle value of a set of values

Mode - the most frequent value in a set of values

Range - the difference between the highest and lowest values

Interquartile Range (IQR) - the range between the first and third quartiles

Standard Deviation - a measure of the spread of data

Variance - the average of the squared differences from the mean

Coefficient of Variation - a measure of the relative variability of a dataset

Probability

Sample Space - the set of all possible outcomes of an experiment

Event - a subset of the sample space

Probability - the chance of an event occurring

Independent Events - events that do not affect each other

Dependent Events - events that do affect each other

Conditional Probability - the probability of an event occurring given that another event has occurred

Bayes' Theorem - a theorem that describes the probability of an event based on prior knowledge of conditions that might have led to it

Statistics in Real-World Contexts

Healthcare - using statistics to analyze patient data and treatment outcomes

Business - using statistics to analyze market trends and consumer behavior

Education - using statistics to analyze student performance and educational outcomes

Environment - using statistics to analyze climate change and environmental data

Social Sciences - using statistics to analyze human behavior and social trends

Finance - using statistics to analyze investment returns and market fluctuations

Types of Bias

Selection Bias - bias in the selection of the sample

Information Bias - bias in the collection of data

Non-response Bias - bias due to non-response to a survey

Survivorship Bias - bias due to only considering successful outcomes

Confirmation Bias - bias due to only seeking information that confirms pre-existing beliefs

Sampling Methods

Simple Random Sampling - every member of the population has an equal chance of being selected

Systematic Sampling - selecting every kth member of the population

Stratified Sampling - dividing the population into strata and sampling from each

Cluster Sampling - dividing the population into clusters and sampling from one or more clusters

Convenience Sampling - selecting members of the population who are easy to reach

Voluntary Response Sampling - selecting members of the population who volunteer to participate

Quota Sampling - selecting members of the population based on certain characteristics

Judgment Sampling - selecting members of the population based on the researcher's judgment

Measures of Dispersion

Range - the difference between the highest and lowest values

Interquartile Range (IQR) - the range between the first and third quartiles

Standard Deviation - a measure of the spread of data

Variance - the average of the squared differences from the mean

Coefficient of Variation - a measure of the relative variability of a dataset

Probability Distributions

Normal Distribution - a bell-shaped curve that is symmetric around the mean

Binomial Distribution - a discrete probability distribution that represents the number of successes in a fixed number of trials

Poisson Distribution - a discrete probability distribution that represents the number of events occurring in a fixed interval of time or space

Exponential Distribution - a continuous probability distribution that represents the time between events in a Poisson process

Logistic Distribution - a continuous probability distribution that is used in logistic regression

Method	Advantages	Disadvantages
Simple Random Sampling	Every member of the population has an equal chance of being selected	Can be time-consuming and expensive
Systematic Sampling	Easy to implement and requires less resources than simple random sampling	May introduce bias if there is a pattern in the population
Stratified Sampling	Ensures that all subgroups of the population are represented in the sample	Requires prior knowledge of the population structure
Cluster Sampling	Reduces costs and increases efficiency by sampling from clusters	May introduce bias if clusters are not homogeneous
Convenience Sampling	Easy to implement and requires minimal resources	Highly biased and not representative of the population
Voluntary Response Sampling	Easy to implement and requires minimal resources	Highly biased and not representative of the population
Quota Sampling	Ensures that the sample is representative of the population in terms of certain characteristics	Subject to researcher bias in selecting members
Judgment Sampling	Allows for the selection of members who are most informative	Highly biased and not representative of the population

GCSE STATISTICS

System Sampling

System sampling is a type of probability sampling where members of the population are selected at regular intervals from a list.

Advantages:

- Easy to implement
- Requires less resources than simple random sampling

Disadvantages:

- May introduce bias if there is a pattern in the population

Measures of Central Tendency

Mean - the average of a set of values

Median - the middle value of a set of values
