**Ultrasound in Oncology: Application of Big Data and Artificial Intelligence** Hui-Xiong Xu, Wei Wang, Richard Gary Barr, Katsutoshi Sugimoto, 2022-02-09 *Bridging the Gap Before and After Birth: Methods and Technologies to Explore the Functional Neural Development in Humans* Marika Berchicci, Silvia Comani, 2015-12-18 Infant brain damage is a serious condition that affects millions of babies each year. The period from late gestation to the first year of life is the most critical one for the development of central and autonomous nervous systems. Medical conditions such as preterm birth may compromise brain function and the end result usually is that the baby may experience long term neurological problems related to a wide range of psychological, physical and functional complications with consequent life long burdens for the individuals and their families and a high socio economic impact for the health care system and the whole of society. During the last years several techniques have been employed to monitor the brain functional development in utero and after birth. As well various analytical methods have been used to understand the functional maturation of the brain and the autonomous nervous system. However in spite of the rapid improvement of diagnostic methods and procedures there is still a widely recognized severe shortage of clinically viable means for the high quality monitoring of the brain function in early life with a direct relevance to acute neurological illness and future neurocognitive outcomes. The studies collected in this e book document the most recent advancements in monitoring systems, analytical methods and clinical diagnostic procedures that contribute to increase our knowledge of the functional development of the human brain and autonomous nervous system during pregnancy and after birth with the ultimate goal of reducing fetal impairment and improving healthcare in the neonatal and infant period. *Computer Analysis of Images and Patterns* Xiaoyi Jiang, Nicolai Petkov, 2009-08-28 This book constitutes the refereed proceedings of the biennially held International Conference on Computer Analysis of Images and Patterns CAIP 2009 which took place in Münster, Germany, September 2-4, 2009. The 148 papers presented together with 2 invited talks were carefully reviewed and selected from 405 submissions. The papers are organized in topical sections on: biometrics, calibration, document analysis, features, graph representations, image processing, image registration, image and video retrieval, medical imaging, object and scene recognition, pattern recognition, shape recovery, segmentation, stereo and video analysis, texture analysis and applications. **Biomedical Image Processing and Classification** Luca Mesin, 2021-05-26 Biomedical image processing is an interdisciplinary field involving a variety of disciplines e.g. electronics, computer science, physics, mathematics, physiology and medicine. Several imaging techniques have been developed providing many approaches to the study of the human body. Biomedical image processing is finding an increasing number of important applications in, for example, the study of the internal structure or function of an organ and the diagnosis or treatment of a disease. If associated with classification methods it can support the development of computer aided diagnosis CAD systems which could help medical doctors in refining their clinical picture. *Muscle and Tendon Plasticity and Interaction in*
