Coral Reef Remote Sensing James A. Goodman, Samuel J. Purkis, Stuart R. Phinn, 2013-04-18 Remote sensing stands as the defining technology in our ability to monitor coral reefs as well as their biophysical properties and associated processes at regional to global scales. With overwhelming evidence that much of Earth's reefs are in decline, our need for large scale repeatable assessments of reefs has never been so great. Fortunately, the last two decades have seen a rapid expansion in the ability for remote sensing to map and monitor the coral reef ecosystem, its overlying water column and surrounding environment. Remote sensing is now a fundamental tool for the mapping, monitoring and management of coral reef ecosystems. Remote sensing offers repeatable quantitative assessments of habitat and environmental characteristics over spatially extensive areas. As the multi-disciplinary field of coral reef remote sensing continues to mature, results demonstrate that the techniques and capabilities continue to improve. New developments allow reef assessments and mapping to be performed with higher accuracy across greater spatial areas and with greater temporal frequency. The increased level of information that remote sensing now makes available also allows more complex scientific questions to be addressed. As defined for this book, remote sensing includes the vast array of geospatial data collected from land, water, ship, airborne and satellite platforms. The book is organized by technology, including visible and infrared sensing using photographic, multispectral and hyperspectral instruments; active sensing using light detection and ranging (LiDAR); acoustic sensing using ship autonomous underwater vehicle (AUV) and in-water platforms; and thermal and radar instruments. **Emphasis and Audience** This book serves multiple roles. It offers an overview of the current state-of-the-art technologies for reef mapping, provides detailed technical information for coral reef remote sensing specialists, imparts insight on the scientific questions that can be tackled using this technology, and also includes a foundation for those new to reef remote sensing. The individual sections of the book include introductory overviews of four main types of remotely sensed data used to study coral reefs, followed by specific examples demonstrating practical applications of the different technologies being discussed. Guidelines for selecting the most appropriate sensor for particular applications are provided, including an overview of how to utilize remote sensing data as an effective tool in science and management. The text is richly illustrated with examples of each sensing technology applied to a range of scientific monitoring and management questions in reefs around the world. As such, the book is broadly accessible to a general audience as well as students, managers, remote sensing specialists, and anyone else working with coral reef ecosystems.

Landscape Dynamics, Soils and Hydrological Processes in Varied Climates Assefa M. Melesse, Wossenu Abtew, 2015-07-21 The book presents the processes governing the dynamics of landscapes, soils and sediments, water and energy under different climatic regions using studies conducted in varied climatic zones including arid, semi-arid, humid and wet regions. The spatiotemporal availability of the processes and fluxes and their linkage to the environment, land, soil and water management are presented at various scales. Spatial scales including laboratory, field

watershed river basin and regions are represented The effect of tillage operations and land management on soil physical characteristics and soil moisture is discussed The book has 35 chapters in seven sections 1 Landscape and Land Cover Dynamics 2 Rainfall Runoff Processes 3 Floods and Hydrological Processes 4 Groundwater Flow and Aquifer Management 5 Sediment Dynamics and Soil Management 6 Climate change impact on vegetation sediment and water dynamics and 7 Water and Watershed Management

Map Librarianship Susan Elizabeth Ward Aber,Jeremy Aber,2016-11-04 Map

Librarianship identifies basic geoliteracy concepts and enhances reference and instruction skills by providing details on finding downloading delivering and assessing maps remotely sensed imagery and other geospatial resources and services primarily from trusted government sources By offering descriptions of traditional maps geographic information systems GIS remote sensing and other geospatial technologies the book provides a timely and practical guide for the map and geospatial librarian to blend confidence in traditional library skill sets Includes rarely discussed concepts of citing and referencing maps and geospatial data fair use and copyright Creates an awareness and appreciation of existing print map collections while building digital stewardship with surrogate map and aerial imagery collections Provides an introduction to the theory and applications of GIS remote sensing participatory neogeography and neocartography practices and other geospatial technologies Includes a list of geospatial resources with descriptions and illustrations of commonly used map types and formats online geospatial data sources and an introduction to the most commonly used geospatial software packages available on both desktop and mobile platforms

Modern Trends in Cartography Jan Brus,Alena Vondrakova,Vit Vozenilek,2014-12-02 The fast exchange of information and knowledge are the essential conditions for successful and effective research and practical applications in cartography For successful research development it is necessary to follow trends not only in this domain but also try to adapt new trends and technologies from other areas Trends in cartography are also quite often topics of many conferences which have the main aim to link research education and application experts in cartography and GIS T into one large platform Such the right place for exchange and sharing of knowledge and skills was also the CARTOCON2014 conference which took place in Olomouc Czech Republic in February 2014 and this book is a compilation of the best and most interesting contributions The book content consists of four parts The first part New approaches in map and atlas making collects studies about innovative ways in map production and atlases compilation Following part of the book Progress in web cartography brings examples and tools for web map presentation The third part Advanced methods in map use includes achievement of eye tracking research and users issues The final part Cartography in practice and research is a clear evidence that cartography and maps played the significant role in many geosciences and in many branches of the society Each individual paper is original and has its place in cartography

Artificial Intelligence

and Internet of Things for Smart Agriculture Praveen Kumar Shukla,Harshal A. Sanghvi,Ankur Agarwal,Abhijit S. Pandya,2025-12-29 The purpose of this book is to explore the fundamentals and implementation strategies of smart

agriculture through the integration of artificial intelligence and Internet of Things technologies It examines critical aspects of planning and decision making while providing recommendations for implementing efficient and effective intelligent agriculture solutions Readers will gain valuable insights into how these smart technologies enhance productivity sustainability and precision in contemporary technology driven farming systems This book Discusses artificial intelligence based 3D mapping of soil smart weeding systems and crop visualization in smart agriculture Covers data analytics based decision making improving crop quality based on precise prediction minimizing the use of pesticides for better soil quality and precision farming systems Examines problems like weather forecasting crop prediction calculation of pesticide quantity irrigation requirement and prediction of the right time for seeding Highlights the role and importance of data visualization techniques in smart agriculture implementation Presents the internet of things and artificial intelligence based solutions for smart agriculture It is primarily written for senior undergraduate graduate students and academic researchers in the fields of electrical engineering electronics and communications engineering computer science and engineering and agricultural science and engineering

Global Land Ice Measurements from Space Jeffrey S. Kargel, Gregory J. Leonard, Michael P. Bishop, Andreas Kääb, Bruce H. Raup, 2014-07-08 An international team of over 150 experts provide up to date satellite imaging and quantitative analysis of the state and dynamics of the glaciers around the world and they provide an in depth review of analysis methodologies Includes an e published supplement *Global Land Ice Measurements from Space Satellite Multispectral Imaging of Glaciers* GLIMS book for short is the leading state of the art technical and interpretive presentation of satellite image data and analysis of the changing state of the world s glaciers The book is the most definitive comprehensive product of a global glacier remote sensing consortium *Global Land Ice Measurements from Space* GLIMS <http://www.glims.org> With 33 chapters and a companion e supplement the world s foremost experts in satellite image analysis of glaciers analyze the current state and recent and possible future changes of glaciers across the globe and interpret these findings for policy planners Climate change is with us for some time to come and its impacts are being felt by the world s population The GLIMS Book to be released about the same time as the IPCC s 5th Assessment report on global climate warming buttresses and adds rich details and authority to the global change community s understanding of climate change impacts on the cryosphere This will be a definitive and technically complete reference for experts and students examining the responses of glaciers to climate change World experts demonstrate that glaciers are changing in response to the ongoing climatic upheaval in addition to other factors that pertain to the circumstances of individual glaciers The global mosaic of glacier changes is documented by quantitative analyses and are placed into a perspective of causative factors Starting with a Foreword Preface and Introduction the GLIMS book gives the rationale for and history of glacier monitoring and satellite data analysis It includes a comprehensive set of six how to methodology chapters twenty five chapters detailing regional glacier state and dynamical changes and an in depth summary and interpretation chapter placing the observed glacier

changes into a global context of the coupled atmosphere land ocean system An accompanying e supplement will include oversize imagery and other highly visual renderings of scientific data *Dynamic Response of Coasts and Estuaries to Human Impacts* Xiao Hua Wang, 2024-07-25 The coasts cover a diverse range of ecosystems within marine estuarine and freshwater environments They are some of the most heavily populated and visited areas and are also some of the most threatened natural habitats Coastal zones are critically important not only to the people who live there but for the health of the planet Many world estuaries and coast environments are under tremendous stress in response to global warming and the increased anthropogenic forcing Warmer waters rising sea levels tropical cyclones storm surges and flooding and coastal erosion are just some of the elements impacting coastal communities worldwide and transforming these environments Coastal hazards such as storm events with associated storm surges are increasing in frequency and intensity as are marine heatwaves that devastate coral reefs Human activities like sewage discharge overfishing navigation channel dredging land reclamation the construction of shipping ports and marine plastics are also responsible for coastal pollution and degradation Therefore a good understanding of the current state of coastal environments and lessons learnt from these human influences is extremely valuable to restore and protect these habitats and ecosystems from further environmental degradation and even catastrophe In this book case studies are used to tell a story about how these environments respond to severe human induced perturbations and what has gone right and wrong from environmental and resource management point of view The readership of the book include high level undergraduate Oceanography students and workers from Coastal Engineering and Management Recent Advances in Geographic Information System for Earth Sciences Yosoon Choi, 2020-06-23 Geographic information systems GISs have played a vital role in Earth sciences by providing a powerful means of observing the world and various tools for solving complex problems The scientific community has used GISs to reveal fascinating details about the Earth and other planets This book on recent advances in GIS for Earth sciences includes 12 publications from esteemed research groups worldwide The research and review papers in this book belong to the following broad categories Earth science informatics geoinformatics mining hydrology natural hazards and society **African Statistical Newsletter**, 2012-03 *Building Knowledge for Climate Resilience in Nepal* Dinesh Raj Bhuju, 2016 Contributed briefs grown under the aegis of Climate Change Research Grant Programme one of the five components of Nepal s Pilot Programme for Climate Resilience moderated by NAST in Nepal Curik Bali Ibnu Maryanto, Mas Noerdjito, 2017 On environmental protection and conservation of natural resources in Bali Island Indonesia collection of articles **Mitteilungen der Geographischen Gesellschaft in Hamburg** Geographische Gesellschaft in Hamburg, 2007 Vols for include list of members *Địa chất và tài nguyên Việt Nam*, 2015 Research on the geology and natural resources in Vietnam 地理科学, 2011 地理科学 2011, 地理科学 **Вестник Московского университета** Московский государственный университет им.
