Target Volume Delineation for Conformal and Intensity-Modulated Radiation Therapy Nancy Y. Lee, Nadeem Riaz, Jiade J. Lu, 2014-12-08 This textbook is designed to help the busy radiation oncologist to accurately and confidently delineate tumor volumes for conformal radiation therapy including IMRT. The book provides an atlas of clinical target volumes (CTVs) for commonly encountered cancers with each chapter illustrating CTV delineation on a slice by slice basis on planning CT images. Common anatomic variants for each tumor are represented in individual illustrations with annotations highlighting differences in coverage. The anatomy of each site and patterns of lymphatic drainage are discussed and their influence on the design of CTVs is explained in detail. Utilization of other imaging modalities including MRI to delineate volumes is highlighted. Key details of simulation and planning are briefly reviewed. Although the emphasis is on target volume delineation for conformal techniques, information is also provided on conventional radiation field setup and design when IMRT is not suitable.

**Clinical Target Volumes in Conformal and Intensity Modulated Radiation Therapy** Vincent Gregoire, Pierre Scalliet, Kie-Kian Ang, 2003-09-22 Conformal radiation therapy represents a new challenge. It offers the prospect of either increasing the radiation dose to target tissues while delivering a similar dose to organs at risk or reducing the dose to organs at risk while maintaining the dose to target tissues. First lymph node areas at risk are established using the available data from pathological examination. Then based on a three dimensional description of the anatomical regions, guidelines for the delineation of the clinical target volumes are proposed. The data presented should enable the reader to make appropriate decisions regarding the selection and delineation of the target volumes when confronted with the most frequent tumor types and sites.

**Intensity Modulated Radiation Therapy** Arno J. Mundt, John C. Roeske, 2005 Presents the technical aspects of IMRT and the clinical aspects of planning and delivery. The volume explores a practical approach for radiation oncologists and medical physicists initiating or expanding an IMRT program. The fundamental biology and physics of IMRT, a site by site review of IMRT techniques with clinical examples and reviews of published outcome studies.
