Sentiment Analysis and Deep Learning Subarna Shakya, Ke-Lin Du, Klimis Ntalianis, 2023-01-01 This book gathers selected papers presented at International Conference on Sentimental Analysis and Deep Learning ICSADL 2022 jointly organized by Tribhuvan University Nepal and Prince of Songkla University Thailand during 16-17 June 2022. The volume discusses state-of-the-art research works on incorporating artificial intelligence models like deep learning techniques for intelligent sentiment analysis applications. Emotions and sentiments are emerging as the most important human factors to understand the prominent user-generated semantics and perceptions from the humongous volume of user-generated data. In this scenario, sentiment analysis emerges as a significant breakthrough technology which can automatically analyze the human emotions in the data-driven applications. Sentiment analysis gains the ability to sense the existing voluminous unstructured data and delivers a real-time analysis to efficiently automate the business processes. Python Deep Learning Ivan Vasilev, 2023-11-24 Master effective navigation of neural networks including convolutions and transformers to tackle computer vision and NLP tasks using Python. Key Features: Understand the theory, mathematical foundations, and structure of deep neural networks. Become familiar with transformers, large language models, and convolutional networks. Learn how to apply them to various computer vision and natural language processing problems. Purchase of the print or Kindle book includes a free PDF eBook. Book Description: The field of deep learning has developed rapidly recently and today covers a broad range of applications. This makes it challenging to navigate and hard to understand without solid foundations. This book will guide you from the basics of neural networks to the state-of-the-art large language models in use today. The first part of the book introduces the main machine learning concepts and paradigms. It covers the mathematical foundations, the structure, and the training algorithms of neural networks and dives into the essence of deep learning. The second part of the book introduces convolutional networks for computer vision. We'll learn how to solve image classification, object detection, instance segmentation, and image generation tasks. The third part focuses on the attention mechanism and transformers, the core network architecture of large language models. We'll discuss new types of advanced tasks they can solve, such as chatbots and text-to-image generation. By the end of this book, you'll have a thorough understanding of the inner workings of deep neural networks. You'll have the ability to develop new models and adapt existing ones to solve your tasks. You'll also have sufficient understanding to continue your research and stay up-to-date with the latest advancements in the field. What you will learn: Establish theoretical foundations of deep neural networks. Understand convolutional networks and apply them in computer vision applications. Become well-versed with natural language processing and recurrent networks. Explore the attention mechanism and transformers. Apply transformers and large language models for natural language and computer vision. Implement coding examples with PyTorch, Keras, and Hugging Face Transformers. Use MLOps to develop and deploy neural network models. Who this book is for: This book is for software developers, engineers, students, data scientists, data

analysts machine learning engineers statisticians and anyone interested in deep learning Prior experience with Python programming is a prerequisite *Evidence-based Medicine for PDAs* Allan F.
