

Preparing for projection

Connecting to the mains supply

Connect the projector to the mains supply with the lead (13). Push the mains switch (26) down – this switches on the projector.

The orange signal lamp (27) lights up, the motor starts running and the projection lamp is preheated.

Further signal lamps tell you at a glance the various settings of the projector.

The mains switch (26) is interlocked with the rotary selector switch (9) and can only be operated when the selector switch (9) is in the "Stop" position.

Temperature monitor

Your projector has a built-in temperature monitor to prevent damage to the projector or to your films if the temperature should rise due to obstructed venting ports or failure of the cooling system. The temperature monitor is located above the projection lamp and is reset by pressing the red key (42). Check, however, immediately whether an air current emerges from the rear cover. If this is not the case, check and if necessary replace the fan belt (see page 15) or the motor control fuse (see page 16).

Important: When running the projector, do not obstruct the air stream through the ventilating slots.

Setting the running speed

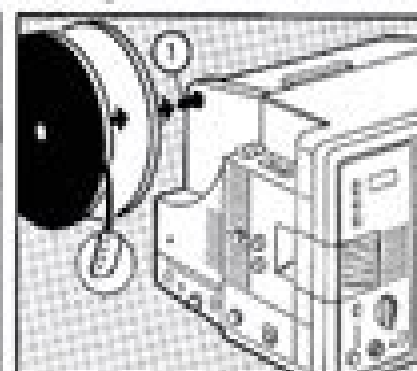

Set the running speed – 18 or 24 fps – by turning the knob to the appropriate setting.

Running speeds can also be changed during projection. However, when projecting sound films the fact that the flywheel takes a few seconds to reach the new speed could cause sound fluctuations. So in this case keep the rotary selector switch at "Stop" for a few seconds after changing the speed.

The actual running speed is continuously adjustable between 18 and 24 fps.

Fitting the reels

Open the reel guard (1), pull off the sleeve of the reel shaft and fully push on the empty take-up reel. Fit the reel shaft sleeve onto the shaft or into the full reel, then mount the latter as well. Turn over the reel lock. Fold down the reel lock to secure the reel.
