Fpga Imaging Reconfigurable Architectures For Image Processing And Analysis:

FPGA Imaging Marek Gorgón, 2014-03-01 Anyone in need of new methods for implementing algorithms requiring large computing power for image processing transmission and analysis will find this book to be an invaluable reference Readers will learn that image processing algorithms can be implemented in parallel using reconfigurable FPGA based systems Ideas and design principles presented in this book can be applied using relatively inexpensive stand alone boards or cards connected to a PC for those building their own equipment and apparatus for imaging as well as those using much more expensive FPGA based blades working in a high performance computing environment Architectures for Computer Vision

Hong Jeong, 2014-08-05 This book provides comprehensive coverage of 3D vision systems from vision models and state of the art algorithms to their hardware architectures for implementation on DSPs FPGA and ASIC chips and GPUs It aims to fill the gaps between computer vision algorithms and real time digital circuit implementations especially with Verilog HDL design The organization of this book is vision and hardware module directed based on Verilog vision modules 3D vision modules parallel vision architectures and Verilog designs for the stereo matching system with various parallel architectures Provides Verilog vision simulators tailored to the design and testing of general vision chips Bridges the differences between C C and HDL to encompass both software realization and chip implementation includes numerous examples that realize vision algorithms and general vision processing in HDL Unique in providing an organized and complete overview of how a real time 3D vision system on chip can be designed Focuses on the digital VLSI aspects and implementation of digital signal processing tasks on hardware platforms such as ASICs and FPGAs for 3D vision systems which have not been comprehensively covered in one single book Provides a timely view of the pervasive use of vision systems and the challenges of fusing information from different vision modules Accompanying website includes software and HDL code packages to enhance further learning and develop advanced systems A solution set and lecture slides are provided on the book s companion website The book is aimed at graduate students and researchers in computer vision and embedded systems as well as chip and FPGA designers Senior undergraduate students specializing in VLSI design or computer vision will also find the book to be helpful in understanding advanced applications **Field Programmable Logic and Application** Jürgen Becker, Marco Platzner, Serge

Vernalde, 2004-08-11 This book contains the papers presented at the 14th International Conference on Field Programmable Logic and Applications FPL held during August 30th September 1st 2004 The conference was hosted by the Interuniversity Micro Electronics Center IMEC in Leuven Belgium The FPL series of conferences was founded in 1991 at Oxford University UK and has been held annually since in Oxford 3 times Vienna Prague Darmstadt London Tallinn Glasgow Villach Belfast Montpellier and Lisbon It is the largest and oldest conference in reconfigurable computing and brings together academic researchers industry experts users and newcomers in an informal welcoming atmosphere that encourages productive exchange of ideas and knowledge between the delegates The fast and exciting advances in field programmable logic are

increasing steadily with more and more application potential and need New ground has been broken in architectures design techniques partial run time reconfiguration and applications of field programmable devices in several different areas Many of these recent innovations are reported in this volume The size of the FPL conferences has grown significantly over the years FPL in 2003 saw 216 papers submitted The interest and support for FPL in the programmable logic community continued this year with 285 scientific papers submitted demonstrating a 32% increase when compared to the year before The technical program was assembled from 78 selected regular papers 45 additional short papers and 29 posters resulting in this volume of proceedings The program also included three invited plenary keynote presentations from Xilinx Gilder Technology Report and Altera and three embedded tutorials from Xilinx the Universit at Karlsruhe TH and the University of Oslo

Electromagnetic Imaging for a Novel Generation of Medical Devices Francesca Vipiana,Lorenzo Crocco,2023-06-29 This book offers the first comprehensive coverage of microwave medical imaging with a special focus on the development of novel devices and methods for different applications in both the diagnosis and treatment of various diseases Upon introducing the fundamentals of electromagnetic imaging it guides the readers to their use in practice by providing extensive information on the corresponding measurement and testing techniques In turn it discusses current challenges in data processing and analysis presenting effective novel solutions developed by different research groups It also describes state of the art medical devices which were designed for specific applications such as brain stroke monitoring lymph node diagnosis image guided hyperthermia and chemotherapy response monitoring The chapters which report on the results of the EU funded project EMERALD ElectroMagnetic imaging for a novel genERation of medicAL Devices are written by leading European engineering groups in electromagnetic medical imaging whose coordinated action is expected to accelerate the translation of this technology from research bench to patient bedside All in all this book offers an authoritative guide to microwave imaging with a special focus on medical imaging for electrical and biomedical engineers and applied physicists and mathematicians It is also intended to inform medical doctors and imaging technicians on the state of the art in non invasive imaging technologies at the purpose of inspiring and fostering the translation of research into clinical prototypes by promoting a stronger collaboration between academic institutions industrial partners hospitals and university medical centers
