Fractal Rainbow Beyond Our Universe:

The Fractal Rainbow David Piñana, 2015-12-14 The current mainstream in cosmological physics proposes a unique universe that started with the Big bang approx 13 700 million years ago and it continues expanding isotropically This mainstream universe seems to be limited by both scale spectra in its upper level approx 10^{27} m by Our Universe external shape boundary or at least by the Observable Universe one and on the other hand on its lower level approx 10^{-35} m by the Planck scale size And we humans are in the middle at intermediate levels spectra between these scale size limits This book intends to show a new conception of the Universe The scale size relativity This article proposes that the universe is composed of many more scale size spectra upper and lower than the currently recognized limits possibly over 10^{1000} m and below 10^{-1000} m And for every level spectra there would be different physical concepts and laws emergents although they could be linked by common underlying laws and concepts And we humans are not in the middle We are just in a random level within this broad spectrum scale size This proposal approach might be a very important advance in explaining certain physical concepts that are currently not entirely clear Dark Energy and Matter Uncertainty Principle the dual nature of the particles particle wave etc It is an interesting and entertaining disclosure treatise on cosmology which allows the reader to know the current state of the art on the cosmological forefront and also it shows a new way of understanding the Universe very different from what we know to date The author is based on its own reflections and proposals as well as on studies and writings of other authors and cosmologists that deal with similar and related concepts and proposals
