Evolutionary Psychology Andrew Goldfinch, 2012 Of all the research programmes in the evolutionary behavioural sciences evolutionary psychology is unique in the scale and intensity of criticism it faces from both philosophers and social scientists forming a powerful impression that no matter its purported benefits evolutionary psychology is a discredited research programme an outdated research programme something one can legitimately dismiss This thesis contends that those who dismiss evolutionary psychology wholesale fail to entitle themselves to that dismissal I begin by championing a streamlined evolutionary psychology one that navigates away from unnecessary controversy one that better reflects the actual practice of evolutionary psychology on the ground and one that doesn't overshadow what's valuable about the programme After correcting several common misconceptions about evolutionary psychology I arrive at the heart of what adaptationist hypothesizing can do for psychology discovering new design features of extant psychological traits and discovering hitherto unknown psychological traits I go through the logic of adaptationist reasoning in psychology Inter alia I argue that although evolutionary psychology hypotheses might start off as simple they can progressively become more complex progressively mirroring the adaptations they're targeting Existing philosophy of science treatments of evolutionary psychology have given prominence to sceptical arguments which means the positive presentation of evolutionary psychology has come rather short something I seek to redress by demonstrating its potential for novel predictions across a wide spectrum of phenomena It's reasonable to demand greater evidence for evolutionary psychology explanations but it's wrong to demand that evolutionary psychology alone satisfy such demands these demands are properly allocated to the evolutionary and behavioural sciences collectively With its legitimate and reasonable role in the evolutionary behavioural sciences correctly identified evolutionary psychology merits serious consideration contrary to the prevailing pessimism concerning its credibility

Hettema,Ian J. Deary,2013-11-11 Differences between people are a fascinating and long standing area of psychological inquiry However previous research has largely been confined to studies at the descriptive level This book tries to explain individual difference rather than merely describe them Explanations are derived from two major competing frameworks the biological and social approaches to individuality The book is based on the contributions of specialists from Europe and North America invited to represent the biological and social points of view Thus a direct confrontation is obtained of two approaches that hitherto have proceeded with virtually no reference to each other Attention is paid to behavior genetics psychophysiology and temperament as well as to social learning behavioral strategies and person environment interactions Differences and commonalities between the biological and social approaches are scrutinized and a common framework is outlined to stimulate future research Due to its innovative character the book is particularly relevant for investigators in the field In addition it may be fruitfully used in advanced graduate level courses in personality psychology *Evolution and Behavior* Lance Workman,Will Reader,2015
