DISTRIBUTED OPERATING SYSTEMS SINHA, PRADEEP K., 1998-01-01 The highly praised book in communications networking from IEEE Press now available in the Eastern Economy Edition This is a non mathematical introduction to Distributed Operating Systems explaining the fundamental concepts and design principles of this emerging technology As a textbook for students and as a self study text for systems managers and software engineers this book provides a concise and an informal introduction to the subject **Disconnected Operation in a Distributed File System** James J. Kistler, 1995-12-13 This book is based on the author s PhD thesis which was selected during the 1993 ACM Doctoral Dissertation Competition as one of the three best submissions The focus of this work is on the issue of availability in distributed file systems It presents the important new technique called disconnected operation in which clients mask failures and voluntary network detachments by emulating the functionality of servers where actual server oriented solutions are inadequate This permits client operation even under complete isolation from the server the clean integration of mobile computers into the system is an important side effect of the new technique The design and implementation of disconnected file service in a working system the Coda file system is described in detail *Handheld and Ubiquitous Computing* Hans-W. Gellersen, 2003-06-29 Truly personal handheld and wearable technologies should be small and unobtrusive and allow access to information and computing most of the time and in most circumstance Complimentary environment based technologies make artifacts of our surrounding world computationally accessible and facilitate use of everyday environments as a ubiquitous computing interface The International Symposium on Handheld and Ubiquitous Computing held for the first time in September 1999 was initiated to investigate links and synergies in these developments and to relate advances in personal technologies to those in environment based technologies The HUC 99 Symposium was organised by the University of Karlsruhe in particular by the Telecooperation Office TecO of the Institute for Telematics in close collaboration with ZKM Karlsruhe which generously hosted the event in its truly inspiring Center for Arts and Media Technology The symposium was supported by the Association of Computing Machinery ACM and the German Computer Society Gesellschaft f r Informatik GI and held in cooperation with a number of special interest groups of these scientific societies HUC 99 attracted a large number of paper submissions from which the international programme committee selected 23 high quality contributions for presentation at the symposium and for inclusion in these proceedings In addition posters were solicited to provide an outlet for novel ideas and late breaking results selected posters are also included with these proceedings The technical programme was further complemented by four invited keynote addresses and two panel sessions *Hybrid Systems III* Rajeev Alur, Thomas A. Henzinger, Eduardo D. Sontag, 1996-04-24 This reference book documents the scientific outcome of the DIMACS SYCON Workshop on Verification and Control of Hybrid Systems held at Rutgers University in New Brunswick NJ in October 1995 A hybrid system consists of digital devices that interact with analog environments Computer science
