Unsettled Topics Concerning the Impact of Quantum Technologies on Automotive Cybersecurity Joachim Taiber,2020-12-10

Quantum computing is considered the next big thing when it comes to solving computational problems impossible to tackle using conventional computers However a major

concern is that quantum computers could be used to crack current cryptographic schemes designed to withstand traditional cyberattacks This threat also impacts future automated vehicles as they become embedded in a vehicle to everything V2X ecosystem In this scenario encrypted data is transmitted between a complex network of cloud based data servers vehicle based data servers and vehicle sensors and controllers While the vehicle hardware ages the software enabling V2X interactions will be updated multiple times It is essential to make the V2X ecosystem quantum safe through use of post quantum cryptography as well other applicable quantum technologies This SAE EDGE Research Report considers the following three areas to be unsettled questions in the V2X ecosystem How soon will quantum computing pose a threat to connected and automated vehicle technologies What steps and measures are needed to make a V2X ecosystem quantum safe What standardization is needed to ensure that quantum technologies do not pose an unacceptable risk from an automotive cybersecurity perspective Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2020026>
