Embedded Systems Development From Functional Models To Implementations:

Embedded Systems Development Alberto Sangiovanni-Vincentelli, Haibo Zeng, Marco Di Natale, Peter Marwedel, 2013-07-19 This book offers readers broad coverage of techniques to model verify and validate the behavior and performance of complex distributed embedded systems The authors attempt to bridge the gap between the three disciplines of model based design real time analysis and model driven development for a better understanding of the ways in which new development flows can be constructed going from system level modeling to the correct and predictable generation of a distributed implementation leveraging current and future research results **Automotive Embedded Systems Handbook** Nicolas Navet, Francoise Simonot-Lion, 2017-12-19 A Clear Outline of Current Methods for Designing and Implementing Automotive Systems Highlighting requirements technologies and business models the Automotive Embedded Systems Handbook provides a comprehensive overview of existing and future automotive electronic systems It presents state of the art methodological and technical solutions in the areas of in vehicle architectures multipartner development processes software engineering methods embedded communications and safety and dependability assessment Divided into four parts the book begins with an introduction to the design constraints of automotive embedded systems It also examines AUTOSAR as the emerging de facto standard and looks at how key technologies such as sensors and wireless networks will facilitate the conception of partially and fully autonomous vehicles The next section focuses on networks and protocols including CAN LIN FlexRay and TTCAN The third part explores the design processes of electronic embedded systems along with new design methodologies such as the virtual platform The final section presents validation and verification techniques relating to safety issues Providing domain specific solutions to various technical challenges this handbook serves as a reliable complete and well documented source of information on automotive embedded systems *New Trends in Electrical Vehicle Powertrains* Luis Romeral Martinez, Miguel Delgado Prieto, 2019-01-30 The electric vehicle and plug in hybrid electric vehicle play a fundamental role in the forthcoming new paradigms of mobility and energy models The electrification of the transport sector would lead to advantages in terms of energy efficiency and reduction of greenhouse gas emissions but would also be a great opportunity for the introduction of renewable sources in the electricity sector The chapters in this book show a diversity of current and new developments in the electrification of the transport sector seen from the electric vehicle point of view first the related technologies with design control and supervision second the powertrain electric motor efficiency and reliability and third the deployment issues regarding renewable sources integration and charging facilities This is precisely the purpose of this book that is to contribute to the literature about current research and development activities related to new trends in electric vehicle power trains **Ernst Denert Award for Software Engineering 2020** Michael Felderer, Wilhelm Hasselbring, Heiko Koziolk, Florian Matthes, Lutz Prechelt, Ralf Reussner, Bernhard Rumpe, Ina Schaefer, 2022-02-28 This open access book provides an overview of the dissertations of the eleven nominees for the Ernst Denert Award for Software

Engineering in 2020 The prize kindly sponsored by the Gerlind Ernst Denert Stiftung is awarded for excellent work within the discipline of Software Engineering which includes methods tools and procedures for better and efficient development of high quality software An essential requirement for the nominated work is its applicability and usability in industrial practice The book contains eleven papers that describe the works by Jonathan Brachthuser EPFL Lausanne entitled What You See Is What You Get Practical Effect Handlers in Capability Passing Style Mojdeh Golagha's Fortiss Munich thesis How to Effectively Reduce Failure Analysis Time Nikolay Harutyunyan's FAU Erlangen Nürnberg work on Open Source Software Governance Dominic Henze's TU Munich research about Dynamically Scalable Fog Architectures Anne Hess's Fraunhofer IESE Kaiserslautern work on Crossing Disciplinary Borders to Improve Requirements Communication Istvan Koren's RWTH Aachen U thesis DevOpsUse A Community Oriented Methodology for Societal Software Engineering Yannic Noller's NU Singapore work on Hybrid Differential Software Testing Dominic Steinhofel's TU Darmstadt thesis entitled Ever Change a Running System Structured Software Reengineering Using Automatically Proven Correct Transformation Rules Peter Wagemann's FAU Erlangen Nürnberg work Static Worst Case Analyses and Their Validation Techniques for Safety Critical Systems Michael von Wenckstern's RWTH Aachen U research on Improving the Model Based Systems Engineering Process and Franz Zieris's FU Berlin thesis on Understanding How Pair Programming Actually Works in Industry Mechanisms Patterns and Dynamics which actually won the award The chapters describe key findings of the respective works show their relevance and applicability to practice and industrial software engineering projects and provide additional information and findings that have only been discovered afterwards e.g. when applying the results in industry This way the book is not only interesting to other researchers but also to industrial software professionals who would like to learn about the application of state of the art methods in their daily work

Formal Methods Jean-Louis Boulanger, 2013-05-10 Although formal analysis programming techniques may be quite old the introduction of formal methods only dates from the 1980s These techniques enable us to analyze the behavior of a software application described in a programming language It took until the end of the 1990s before formal methods or the B method could be implemented in industrial applications or be usable in an industrial setting Current literature only gives students and researchers very general overviews of formal methods The purpose of this book is to present feedback from experience on the use of formal methods such as proof and model checking in industrial examples within the transportation domain This book is based on the experience of people who are currently involved in the creation and evaluation of safety critical system software The involvement of people from within the industry allows us to avoid the usual problems of confidentiality which could arise and thus enables us to supply new useful information photos architecture plans real examples etc Topics covered by the chapters of this book include SAET METEOR the B method and B tools model based design using Simulink the Simulink design verifier proof tool the implementation and applications of SCADE Safety Critical Application Development Environment GATeL A V V Platform for SCADE models and ControlBuild

Model-Implementation Fidelity in Cyber Physical System Design Anca Molnos,Christian Fabre,2016-12-08 This book puts in focus various techniques for checking modeling fidelity of Cyber Physical Systems CPS with respect to the physical world they represent The authors present modeling and analysis techniques representing different communities from very different angles discuss their possible interactions and discuss the commonalities and differences between their practices Coverage includes model driven development resource driven development statistical analysis proofs of simulator implementation compiler construction power temperature modeling of digital devices high level performance analysis and code device certification Several industrial contexts are covered including modeling of computing and communication proof architectures models and statistical based validation techniques
