## **Exercises In Dynamic Macroeconomic Theory:**

**Exercises in Dynamic Macroeconomic Theory** Rodolfo E. Manuelli, Thomas J Sargent, 2009-06-01 This book is a companion volume to *Dynamic Macroeconomic Theory* by Thomas J Sargent It provides scrimmages in dynamic macroeconomic theory precisely the kind of drills that people will need in order to learn the techniques of dynamic programming and its applications to economics By doing these exercises the reader can acquire the ability to put the theory to work in a variety of new situations build technical skill gain experience in fruitful ways of setting up problems and learn to distinguish cases in which problems are well posed from cases in which they are not The basic framework provided by variants of a dynamic general equilibrium model is used to analyze problems in macroeconomics and monetary economics An equilibrium model provides a mapping from parameters of preferences technologies endowments and rules of the game to a probability model for time series The rigor of the logical connections between theory and observations that the mapping provides is an attractive feature of dynamic equilibrium or rational expectations models This book gives repeated and varied practice in constructing and interpreting this mapping *Dynamic Macroeconomic Theory* Thomas J. Sargent, 2009-06-01 The tasks of macroeconomics are to interpret observations on economic aggregates in terms of the motivations and constraints of economic agents and to predict the consequences of alternative hypothetical ways of administering government economic policy General equilibrium models form a convenient context for analyzing such alternative government policies In the past ten years the strengths of general equilibrium models and the corresponding deficiencies of Keynesian and monetarist models of the 1960s have induced macroeconomists to begin applying general equilibrium models This book describes some general equilibrium models that are dynamic that have been built to help interpret time series of observations of economic aggregates and to predict the consequences of alternative government interventions The first part of the book describes dynamic programming search theory and real dynamic capital pricing models Among the applications are stochastic optimal growth models matching models arbitrage pricing theories and theories of interest rates stock prices and options The remaining parts of the book are devoted to issues in monetary theory currency in utility function models cash in advance models Townsend turnpike models and overlapping generations models are all used to study a set of common issues By putting these models to work on concrete problems in exercises offered throughout the text Sargent provides insights into the strengths and weaknesses of these models of money An appendix on functional analysis shows the unity that underlies the mathematics used in disparate areas of rational expectations economics This book on dynamic equilibrium macroeconomics is suitable for graduate level courses a companion book **Exercises in Dynamic Macroeconomic Theory** provides answers to the exercises and is also available from Harvard University Press **Introduction to Dynamic Macroeconomic Theory** George T. McCandless, Neil Wallace, 1991 Economies are constantly in flux and economists have long sought reliable means of analyzing their dynamic properties This book provides a succinct and accessible exposition of

modern dynamic or intertemporal macroeconomics The authors use a microeconomics based general equilibrium framework specifically the overlapping generations model which assumes that in every period there are two generations which overlap This model allows the authors to fully describe economies over time and to employ traditional welfare analysis to judge the effects of various policies By choosing to keep the mathematical level simple and to use the same modeling framework throughout the authors are able to address many subtle economic issues They analyze savings social security systems the determination of interest rates and asset prices for different types of assets Ricardian equivalence business cycles chaos theory investment growth and a variety of monetary phenomena Introduction to Dynamic Macroeconomic Theory will become a classic of economic exposition and a standard teaching and reference tool for intertemporal macroeconomics and the overlapping generations model The writing is exceptionally clear Each result is illustrated with analytical derivations graphically and by worked out examples Exercises which are strategically placed are an integral part of the book

*Workbook for Macroeconomic Theory* Fernando de Holanda Barbosa, Luiz Antônio de Lima Junior, 2025-05-09 This book presents the answers to the exercises in *Macroeconomic Theory Fluctuations Inflation and Growth in Closed and Open Economies* 2nd Edition by Fernando de Holanda Barbosa Cham Switzerland Springer 2024 hereafter referred as *Macro Theory* Altogether there are 170 exercises in eleven chapters and three appendices Many of these exercises are based on or inspired in the literature listed in the bibliography of *Macro Theory* although the sources are not documented The goal of a good number of exercises is to help the student to develop the skills necessary to obtain the model's empirically testable predictions You should try to solve each exercise by yourself but do not be upset if you cannot Some exercises are very hard and take time to work out However to learn you should persevere and try again and again We hope that this workbook will help you in the learning process of macroeconomic theory The most important change in this second edition is Part IV which presents an abridged survey of the empirical evidence on macroeconomic models This part has four chapters Chapter 12 takes care of growth Chapter 13 analyzes the main characteristics of business cycles Chapter 14 presents the empirical evidence on Keynesian models and Chapter 15 deals with several issues related to the budget constraint such as chronic inflation the pathologies of hyperinflation public debt crises external debt crises and the fiscal theory of the price level

Recursive Macroeconomic Theory, fourth edition Lars Ljungqvist, Thomas J. the time inconsistency of optimal policies These insights are used in other chapters to simplify recursive formulations of Ramsey plans and credible government policies The second new chapter explores the mechanics of matching models and identifies a common channel through which productivity shocks are magnified across a variety of matching models Other chapters have been extended and refined For example there is new material on heterogeneous beliefs in both complete and incomplete markets models and there is a deeper account of forces that shape aggregate labor supply elasticities in lifecycle models The book is suitable for first and second year graduate courses in macroeconomics Most chapters conclude with exercises many exercises and examples use Matlab or Python computer programming languages      **Workbook for**
