Interest rates are a calculation of how much extra you have to pay back in addition to your principal loan amount. So the higher the interest rate, the more you have to pay.

Now let's say your some small dick, mayonnaise aficionado that wants to borrow shares to use in a short position, well those cost money to borrow. Often referred to as cost to borrow. But let's say you and your mayonnaise company are up to your ears in stupid mayonnaise purchases, so you don't have the capital to do this? Well, you will have to borrow money from a bank so you can pay the cost to borrow on shares. Even if you manage to profit a bit from your short position endeavors, you still have to pay back your loan + interest. If the interest is really high, this gets difficult and the endeavor to keep doing this no longer becomes feasible. In fact if it looks like you are really going to be up to your ass in rotten mayonnaise, the bank may say, "fuck you mayonnaise man, pay me now!" This is called a margin call and it means you have to close all your positions and liquidate, which includes buying the shares you are required to give back from borrowing in your short position. If you have to buy those shares back, but there aren't enough, then you have to offer more for them. This escalates and pretty soon you are offering mayonnaise and money for any shares you can find, but apes don't eat mayonnaise, they eat fucking bananas and grubs and shit. So in short, this is how a 75bps rate hike can help apes.

Harmonic Analysis for Anisotropic Random Walks on Homogeneous Trees Alessandro Figà-Talamanca, Tim Steger, 1994 This work presents a detailed study of the anisotropic series representations of the free product group $Z \times Z \times Z \times Z$. These representations are infinite dimensional irreducible and unitary and can be divided into principal and complementary series. Anisotropic series representations are interesting because while they are not restricted from any larger continuous group in which the discrete group is a lattice they nonetheless share many properties of such restrictions. The results of this work are also valid for nonabelian free groups on finitely many generators.
