Elliptic Curves Modular Forms And Fermats Last Theorem 2nd Edition:

Modular Forms and Fermat's Last Theorem Gary Cornell, Joseph H. Silverman, Glenn Stevens, 1997 A collection of expanded versions of lectures given at an instructional conference on number theory and arithmetic geometry held at Boston University The purpose of the conference and indeed this book is to introduce and explain the many ideas and techniques used by Wiles in his proof and to explain how his result can be combined with Ribet's theorem and ideas of Frey and Serre to show at long last that Fermat's Last Theorem is true The book begins with an overview of the complete proof theory of elliptic curves modular functions modular curves Galois cohomology and finite group schemes In recognition of the historical significance of Fermat's Last Theorem the volume concludes by reflecting on the history of the problem while placing Wiles theorem into a more general Diophantine context suggesting future applications *Elliptic Curves* Lawrence C.

Washington, 2008-04-03 Like its bestselling predecessor *Elliptic Curves Number Theory and Cryptography* Second Edition develops the theory of elliptic curves to provide a basis for both number theoretic and cryptographic applications With additional exercises this edition offers more comprehensive coverage of the fundamental theory techniques and application

Fermat's Last Theorem Takeshi Saitō, 2013-11-01 This book together with the companion volume *Fermat's Last Theorem The Proof* presents in full detail the proof of Fermat's Last Theorem given by Wiles and Taylor With these two books the reader will be able to see the whole picture of the proof to appreciate one of the deepest achievements in the history of mathematics Crucial arguments including the so called 3-5 trick Ribet's theorem etc are explained in depth The proof relies on basic background materials in number theory and arithmetic geometry such as elliptic curves modular forms Galois representations deformation rings modular curves over the integer rings Galois cohomology etc The first four topics are crucial for the proof of Fermat's Last Theorem they are also very important as tools in studying various other problems in modern algebraic number theory The remaining topics will be treated in the second book to be published in the same series in 2014 In order to facilitate understanding the intricate proof an outline of the whole argument is described in the first preliminary chapter and more details are summarised in later chapters Elliptic Curves, Modular Forms & Fermat's Last Theorem John Coates, Shing-Tung Yau, 1997 These proceedings are based on a conference at the Chinese University of Hong Kong held in response to Andrew Wiles's conjecture that every elliptic curve over \mathbb{Q} is modular The survey article describing Wiles's work is included as the first article in the present edition *Seminar on Fermat's Last Theorem* Vijaya Kumar

Murty, 1995 The most significant recent development in number theory is the work of Andrew Wiles on modular elliptic curves Besides implying Fermat's Last Theorem his work establishes a new reciprocity law Reciprocity laws lie at the heart of number theory Wiles work draws on many of the tools of modern number theory and the purpose of this volume is to introduce readers to some of this background material Based on a seminar held during 1993-1994 at the Fields Institute for Research in Mathematical Sciences this book contains articles on elliptic curves modular forms and modular curves Serre's

conjectures Ribet's theorem deformations of Galois representations Euler systems and annihilators of Selmer groups All of the authors are well known in their field and have made significant contributions to the general area of elliptic curves Galois representations and modular forms Features Brings together a unique collection of number theoretic tools Makes accessible the tools needed to understand one of the biggest breakthroughs in mathematics Provides numerous references for further study

Notes from the International Autumn School on Computational Number Theory Ilker Inam, Engin Büyükaşık, 2019-04-17 This volume collects lecture notes and research articles from the International Autumn School on Computational Number Theory which was held at the Izmir Institute of Technology from October 30th to November 3rd 2017 in Izmir Turkey Written by experts in computational number theory the chapters cover a variety of the most important aspects of the field By including timely research and survey articles the text also helps pave a path to future advancements Topics include Modular forms L functions The modular symbols algorithm Diophantine equations Nullstellensatz Eisenstein series Notes from the International Autumn School on Computational Number Theory will offer graduate students an invaluable introduction to computational number theory In addition it provides the state of the art of the field and will thus be of interest to researchers interested in the field as well

Introduction to Elliptic Curves and Modular Forms Neal Koblitz, 1984 The theory of elliptic curves and modular forms provides a fruitful meeting ground for such diverse areas as number theory complex analysis algebraic geometry and representation theory This book starts out with a problem from elementary number theory and proceeds to lead its reader into the modern theory covering such topics as the Hasse Weil L function and the conjecture of Birch and Swinnerton Dyer The second edition of this text includes an updated bibliography indicating the latest dramatic changes in the direction of proving the Birch and Swinnerton conjecture It also discusses the current state of knowledge of elliptic curves

CRC Concise Encyclopedia of Mathematics Eric W. Weisstein, 2002-12-12 Upon publication the first edition of the CRC Concise Encyclopedia of Mathematics received overwhelming accolades for its unparalleled scope readability and utility It soon took its place among the top selling books in the history of Chapman Hall CRC and its popularity continues unabated Yet also unabated has been the demand for a new edition

Challenges for the 21st Century Louis H. Y. Chen, 2001-05-08 The International Conference on Fundamental Sciences Mathematics and Theoretical Physics provided a forum for reviewing some of the significant developments in mathematics and theoretical physics in the 20th century for the leading theorists in these fields to expound and discuss their views on new ideas and trends in the basic sciences as the new millennium approached for increasing public awareness of the importance of basic research in mathematics and theoretical physics and for promoting a high level of interest in mathematics and theoretical physics among school students and teachers This was a major conference with invited lectures by some of the leading experts in various fields of mathematics and theoretical physics

Galois Cohomology of Elliptic Curves John Coates, R. Sujatha, 2000 This book is based on the material presented in four lectures given by J Coates at the Tata Institute of Fundamental Research The original notes were modified

and expanded in a joint project with R Sujatha The book discusses some aspects of the Iwasawa theory of elliptic curves over algebraic fields Let E be an elliptic curve defined over an algebraic number field F The fundamental idea of the Iwasawa theory is to study deep arithmetic questions about E/F via the study of coarser questions about the arithmetic of E over various infinite extensions of F Challenges for the Twenty-first Century Louis Hsiao Yun Chen, 2001 The International Conference on Fundamental Sciences Mathematics and Theoretical Physics provided a forum for reviewing some of the significant developments in mathematics and theoretical physics in the 20th century for the leading theorists in these fields to expound and discuss their views on new ideas and trends in the basic sciences as the new millennium approached for increasing public awareness of the importance of basic research in mathematics and theoretical physics and for promoting a high level of interest in mathematics and theoretical physics among school students and teachers This was a major conference with invited lectures by some of the leading experts in various fields of mathematics and theoretical physics
