

MS5002E Gas Turbines

The MS5002E, the latest addition to the GE Energy family of gas turbines, is a 32MW class machine designed for high efficiency, low environmental impact and high reliability. The MS5002E will be available in both single and dual-shaft versions to cover power generation and mechanical drive applications.

This latest model was developed in response to customer demand for a machine in the 32 MW range with low fuel consumption, reduced emissions and high availability and reliability. In order to guarantee high reliability and availability the MS5002E has a conservative firing temperature with respect to the state-of-the-art. High efficiency was achieved through the use of advanced design tools to optimize airfoils, clearances, leakages and the distribution of cooling flows.

The MS5002E offers NOx emission levels down to 25 ppm through the use of a dry-low emission combustion system derived from the GE Energy DLE2 combustion technology.

The design of the MS5002E was thoroughly validated through an extensive test program that included a full scale test of the axial compressor, full scale rotordynamic testing and full load testing of the gas turbine system.

The MS5002E single and dual shaft 32MW class machine represents a world-class engineering achievement to provide customers with a high efficiency, low emissions machine with outstanding reliability matched for Oil & Gas industry applications.
