

7HA.01/.02 GAS TURBINE

The World's Largest and Most Efficient Heavy Duty Gas Turbine

GE's 7HA gas turbine is the industry leader among H-class offerings, and is available in two models—the 7HA.01 at 275 MW and the 7HA.02 at 337 MW. Thanks to a simplified air-cooled architecture, advanced materials, and proven operability and reliability, the 7HA delivers the lowest life cycle cost per MWh for 60-Hz applications. The economies of scale created by this high power density gas turbine, combined with its more than 61% combined-cycle efficiency, enable the most cost-effective conversion of fuel to electricity to help operators meet increasingly dynamic power demands.

Industry-Leading Operational Flexibility for Increased Dispatch and Ancillary Revenue

- Fast 30-minute rampup from start, connected to gas turbine full load.
- 50 MW/minute ramping capability within emissions compliance.
- Reaches turndown as low as 25% of gas turbine base load output within emissions compliance.
- Fuel flexible to accommodate gas and liquid fuels with wide gas variability, including high ethane (skate) gas and liquefied natural gas.

Least Complex H-Class Offering

- A simpler configuration than GE's previous H-class fleet and one that does not require a separate cooling air system.
- The 7HA is now available with an air-cooled generator for simplified installation and maintainability.
- Modular systems ease installation with 10,000 fewer man-hours than GE's TF03 gas turbine.
- Streamlined maintenance with quick-removal turbine roof, field-replaceable blades, and 100% borescope inspection coverage for all blades.
- Simplified dual fuel system uses less water, eliminates recirculation, and utilizes enhanced liquid purge for improved reliability and dependability.

Full-Load Validation

- At the heart of GE's heavy-duty gas turbine validation program is the advanced full-scale, full-load test facility in Greenville, SC.
- Test stand enables GE to validate the 7HA gas turbine over an operating envelope larger than the variances an entire fleet of turbines would experience in the field, an approach that is superior to operating a field prototype for 8,000 hours.
