MOP Connection: Electric Circuits: sublevels 2 and parts of 3

Review:

1. Electric field is defined as the aura about the space surrounding a charged object that exerts an electrical influence upon other charged objects in that space. The direction of the electric field vector is defined as the direction that a positive test charge would be accelerated. Potential energy is the energy stored in an object due to the position of that object.

A Gravitational Analogy:

2. Two diagrams are shown at the right.

In diagram A, a mass is held at an elevated position. When let go of, the mass falls from point A to point B.

In diagram B, the mass is originally at point A and a person moves it back up to point B.

For each diagram, indicate if work is done by a non-conservative force in moving the object from its initial position (point A) to its position at point B. Finally, indicate the position of greatest gravitational potential energy.

Circle the answers in the space below the diagrams.

Diagram A

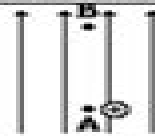

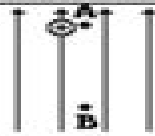

W_{nc} done on mass: Yes or No
Highest PE: A or B

Diagram B

W_{nc} done on mass: Yes or No
Highest PE: A or B

3. The following diagrams show an electric field and two points - labeled A and B - located within the electric field. A positive test charge is shown at point A. For each diagram, indicate whether work must be done upon the charge to move it from point A to point B. Finally, indicate the point (A or B) with the greatest electric potential energy and the greatest electric potential (PE / charge).

Arabadzhi, 1950 The contact potential difference between water and ice has never been previously measured although this difference is of considerable importance in meteorology In our opinion it is precisely the collision of drops of water with ice crystals in clouds which causes the electricity of lightning The experiments show that the contact potential difference between water and ice is 0.17 plus or minus 0.025 Thus contrary to the opinions of Simpson and Wilson we believe the chief cause of the electricity of lightning is the contact potential difference between water and ice Author **An Alternating Current Potential Difference** Leon Grabowski, 1983
