**Gis** Michael Worboys, Matt Duckham, 2004-05-15 This fully updated new edition of Michael Worboys highly successful book addresses GIS from a computing perspective as opposed to a cartographic geographic or management perspective and highlights the fundamental role played by computing science information systems and IT in the field of GIS It reflects new developments such as the impact the internet has had in terms of distribution and visualization and covers the ever increasing roles of AI uncertainty handling and agent based computing GIS A Computing Perspective is aimed at a wide range of students including those studying computer science information systems and information technology as well as GIS

**GIS** Michael F. Worboys, Matt Duckham, 2004-05-11 GIS A Computing Perspective Second Edition provides a full up to date overview of GIS both Geographic Information Systems and the study of Geographic Information Science Analyzing the subject from a computing perspective the second edition explores conceptual and formal models needed to understand spatial information and examines the representations and data structures needed to support adequate system performance This volume also covers the special purpose interfaces and architectures required to interact with and share spatial information and explains the importance of uncertainty and time The material on GIS architectures and interfaces as well as spatiotemporal information systems is almost entirely new The second edition contains substantial new information and has been completely reformatted to improve accessibility Changes include A new chapter on spatial uncertainty Complete revisions of the bibliography index and supporting diagrams Supplemental material is offset at the top of the page as are references and links for further study Definitions of new terms are in the margins of pages where they appear with corresponding entries in the index

**GIS** Michael F. Worboys, 1995-10-30 This aims to make the computing principles underlying geographic databases understandable and accessible to current and potential users of such systems It overviews database system philosophy describes database concepts eg storage retrieval architecture conceptual modelling and database querying It then focuses on the characteristics of GIS spatial data and spatial databases concluding with a discussion of current future research trends

**An Introduction to Geographical Information Systems** D. Ian Heywood, Sarah Cornelius, Steve Carver, 1998 This introductory text to the world of geographical information systems is aimed at students at all levels from undergraduates to professionals retraining in GIS

**Earth Science Satellite Remote Sensing** John J. Qu, Wei Gao, Menas Kafatos, Robert E. Murphy, Vincent V. Salomonson, 2007-04-29 This book provides information on the Earth science remote sensing data information and data format such as HDF EOS It evaluates the current

data processing approaches and introduces data searching and ordering from different public domains. It further explores the remote sensing and GIS migration products and WebGIS applications. **Geographic Information Research** Massimo Craglia, H. Onsrud, 2004-01-14. Geographic Information Research is a broad discipline and is being actively pursued world wide. A group of researchers in both North America and Europe have come together as contributors to this volume as a way of combining their expertise. The emphasis is on matters of political strategic and organizational importance rather than on technology or systems and covers the theory and social and political practice which goes hand in hand with GIS.

**Decision Support Systems in Urban Planning** Harry Timmermans, 2003-09-02. This book presents a set of selected and edited papers presented at the 2nd and 3rd Design and Decision Support Conference. The purpose is to provide examples of innovative research in decision support systems in urban planning from throughout the world.

*Cartographic Perspectives*, 2010. *Spatial and Temporal Reasoning in Geographic Information Systems* Max J. Egenhofer, Reginald G. Golledge, 1998. In an effort to further investigation into critical development facets of geographic information systems GIS, this book explores the reasoning processes that apply to geographic space and time. As a result of an initiative sponsored by the National Center for Geographic Information and Analysis (NCGIA), it treats the computational, cognitive and social science applications aspects of spatial and temporal reasoning in GIS. Essays were contributed by scholars from a broad spectrum of disciplines including geography, cartography, surveying and engineering, computer science, mathematics and environmental and cognitive psychology.

**GeoComputation, Second Edition** Robert J. Abrahart, Linda M. See, 2014-06-23. A revision of Openshaw and Abrahart's seminal work *GeoComputation*, Second Edition retains influences of its originators while also providing updated state of the art information on changes in the computational environment. In keeping with the field's development, this new edition takes a broader view and provides comprehensive coverage across the field of GeoComputation. See What's New in the Second Edition: Coverage of ubiquitous computing, the GeoWeb, reproducible research, open access and agent based modelling. Expanded chapter on Genetic Programming and a separate chapter developed on Evolutionary Algorithms. Ten chapters updated by the same or new authors and eight new chapters added to reflect state of the art. Each chapter is a stand alone entity that covers a particular topic. You can simply dip in and out or read it from cover to cover. The opening chapter by Stan Openshaw has been preserved with only a limited number of minor essential modifications having been enacted. This is not just a matter of respect: Openshaw's work is eloquent, prophetic and his overall message remains largely unchanged. In contrast to other books on this subject, *GeoComputation*, Second Edition supplies a state of the art review of all major areas in GeoComputation with chapters written especially for this book by invited specialists. This approach helps develop and expand a computational culture, one that can exploit the ever increasing richness of modern geographical and geospatial datasets. It also supplies an instructional guide to be kept within easy reach for regular access and when need arises.
