Evapotranspiration Covers For Landfills And Waste Sites:

Evapotranspiration Covers for Landfills and Waste Sites Victor L. Hauser, 2016-04-19 New natural self renewing and low cost evapotranspiration ET covers for landfills provide a solution to landfill waste that is clean green and economical Evapotranspiration Covers for Landfills and Waste Sites examines the concept theory and the practical proof then explains the technology design and application It delineates the essence *Feasibility Study, Primary Designs and Development of Alternative EvapoTranspiration Covers for Landfills and Waste Dump Sites in Tropical Locations* Francisco Jose Escobar, 2011 ABSTRACT Simulations were performed to evaluate the effect of the weather period the effect of soil thickness the effect of vegetation the LAI Leaf Area Index and finally to determine what regions in Puerto Rico show potential for implementing ET covers Results from this study showed some sub regions or locations belonging to the six Ecozones or regions of Puerto Rico were able to meet the preliminary requirements for hydrological performance as required by the RCRA However field evaluation of these designs should be performed before full implementation of ET covers in these regions Of the 21 locations studied in the preliminary design 15 were adequate for study by modeling them to confirm the feasibility of using the Evapotranspiration covers in them After this modeling or simulation was conducted the results were as follows eight locations can effectively use ET covers using as covering vegetation pastures Five locations can use ET covers but the vegetation needs to be changed using then shrubs and grass The other locations are being rejected for this study The selected locations are supposed to have thickness less than 20 m Application of Phytotechnologies for Cleanup of Industrial, Agricultural and Wastewater Contamination Peter A. Kulakow, Valentina V. Pidlisnyuk, 2009-11-03 As government and community leaders private companies citizens and applied scientists search for low cost methods to cleanup environmental pollution phytotechnologies can contribute to the solution by utilizing natural processes to reduce environmental risk Phytotechnologies use vegetation to manage environmental contaminants in soil surface water and groundwater based on site specific design considerations that can save 50 to 75 percent of the capital and operating costs compared to conventional remediation and containment technologies Successful phytotechnology applications are based on scientific knowledge of plant physiology chemical contaminants climate and soil conditions This book presents current research findings that address soil and water contamination with obsolete pesticides radionuclides and other inorganic and organic contaminants This book documents international sharing of information by scientists and stakeholders seeking to use the best available information to disseminate existing knowledge on phytotechnologies and exchange experience of field scale applications for cleanup of industrial agricultural and wastewater contamination to assess existing knowledge and identify research needs and directions for future work especially in regard to environmental management in Central and Eastern Europe and Central Asia and to promote collaboration between different countries in preparing applications for environmental remediation and restoration Handbook of Advanced Industrial and Hazardous Wastes Treatment

Lawrence K. Wang, Yung-Tse Hung, Nazih K. Shamas, 2009-11-04 This authoritative reference for technical information on industrial and hazardous waste treatment provides broad comprehensive coverage of basic and advanced principles and applications. It addresses wastes in a variety of industries including metal finishing, food processing, milk production, foundries and chemical manufacturing. Complete with numerous figures, tables, examples and case histories, the text explores new methods of clean production and waste minimization and addresses the treatment of landfills and underground storage tanks.

Biomass for Sustainable Applications Sarra Gaspard, Mohamed Chaker Ncibi, 2013-12-05 Sustainable sources of energy and a supply of good quality water are two major challenges facing modern societies across the globe. Biomass from cultivated plants may be used to generate energy but at the cost of contaminated surface waters from pesticide and fertiliser use. This two volume set examines the potential use of biomass as both a source of sustainable energy and a resource to tackle contaminated soils and wastewaters. Consideration is given to non food crops, bacteria and fungi as sources of biomass and the book enables the reader to identify the best local bioresources according to the desired application. With contributions from across the globe, this is an essential guide to meeting the demand for energy and pollution remediation by exploiting local and renewable resources. The example scenarios given may inspire policy makers and local officers while chemical engineers and environmental scientists in both academia and industry will benefit from the comprehensive review of current thinking and application.
