through *Gender* here reintroduces gender as a meaningful category of analysis for environmental history showing how women's actions, desires, and choices have shaped the world and seeing men as gendered actors as well. In thirteen essays that show how gendered ideas have shaped the ways in which people have represented, experienced, and consumed their world, Virginia Scharff and her coauthors explore interactions between gender and environment in history. Ranging from colonial borderlands to transnational boundaries, from mountaintop to marketplace, they focus on historical representations of humans and nature on questions about consumption, environmental politics, and on the complex reciprocal relations among human bodies and changing landscapes. They also challenge the ecofeminist position by challenging the notion that men and women are essentially different creatures with biologically different destinies. Each article shows how a person or group of people in history have understood nature in gendered terms and acted accordingly, often with dire consequences for other people and organisms. Here are considerations of the ways we study sexuality among birds of William Byrd's masking sexual encounters in his account of an eighteenth-century expedition, of how the ecology of fire in a changing built environment has reshaped firefighters' own gendered identities. Some are playful as in a piece on the evolution of snow bunnies to shred bunnies. Others are dead serious as in a chilling portrait of how endocrine disruptors are reinventing humans, animals, and water systems from the cellular level out. Aiding and adding significantly to the enterprise of environmental history, *Seeing Nature through Gender* bridges gender history and environmental history in unexpected ways to show us how the natural world can remake the gendered patterns we've engraved on ourselves and on the planet.

**Essential Concepts in Molecular Pathology** William B. Coleman, Gregory J. Tsongalis, 2019-11-23. *Essential Concepts in Molecular Pathology* Second Edition offers an introduction to molecular genetics and the molecular aspects of human disease. The book illustrates how pathologists harness their understanding of these entities to develop new diagnostics and treatments for various human diseases. This new edition offers pathology residents and molecular pathology fellows an advanced understanding of the molecular mechanisms of disease that goes beyond what they learned in medical and graduate school. By bridging molecular concepts of pathogenesis to the clinical expression of disease in cell, tissue, and organ, this fully updated introductory reference provides the background necessary for an understanding of today's advances in pathology and medicine. Explains the practice of molecular medicine and the translational aspects of molecular pathology, including molecular diagnostics, molecular assessment, and personalized medicine. Orients non-pathologists on what pathologists look for and how they interpret their observational findings based on histopathology. Provides the reader with what is missing from most targeted introductions to pathology: the cell biology behind pathophysiology.

**Living With Endometriosis** Kate Weinstein, 1987-01-21. *Cultural Strategies of Agenda Denial* Roger W. Cobb, Marc Howard Ross, 1997. This is the first book devoted to examining why some issues proposed by aggrieved individuals or groups are denied access to policy agendas. The book contains case studies that look at the policy process from the perspective of the strategies opponents often use to

ensure agenda denial strategies usually motivated by perceived threats to widely held world views and identities
