Listening in the Field Joeri Bruyninckx,2018-05-11 The transformation of sound recording into a scientific technique in the study of birdsong as biologists turned wildlife sounds into scientific objects Scientific observation and representation tend to be seen as exclusively visual affairs But scientists have often drawn on sensory experiences other than the visual Since the end of the nineteenth century biologists have used a variety of techniques to register wildlife sounds In this book Joeri Bruyninckx describes the evolution of sound recording into a scientific technique for studying the songs and calls of wild birds and asks what it means to listen to animal voices as a scientist The practice of recording birdsong took shape at

the intersection of popular entertainment and field ornithology turning recordings into objects of investigation and popular fascination Shaped by the technologies and interests of amateur naturalism and music teaching radio broadcasting and gramophone production hobby electronics and communication engineering birdsong recordings traveled back and forth between scientific and popular domains to appear on gramophone recordings radio broadcasts and movie soundtracks Bruyninckx follows four technologies the musical score the electric microphone the portable magnetic tape recorder and the sound spectrograph through a cultural history of field recording and scientific listening He chronicles a period when verbal descriptions musical notations and onomatopoeic syllables represented birdsong and shaped a community of listeners later electric recordings struggled with notions of fidelity realism objectivity and authenticity scientists early citizen scientists and the recording industry negotiated recording exchange and trained listeners complemented the visual authority of spectrographic laboratory analyses This book reveals a scientific process fraught with conversions between field and laboratory sound and image science and its various audiences
