*Electromagnetics* Giorgio Franceschetti, 2013-06-29 During the last twenty years the lifestyle of a large portion of the inhabitants of our planet has changed dramatically This would never have been possible without the massive use of electronic and photonic technology telecommunications and computers These disciplines are designed to code transmit detect decode and process signals and related information and can be broadly addressed as information science and technology In the sophisticated society in which we live and operate this science is diffused transversely and plays a major role in almost every human activity Information science and technology is the basis of a powerful industry that does not suffer the shortcomings of more traditional human enterprises Information is a renewable source and its control and processing rely on software codes which are a creation of the mind and on related hardware incredibly sophisticated but made out of simple abundant materials The rate of change and transformation of this industry is the highest mankind has ever experienced and it requires not only the replacement of technologies but also a continuous updating of expertise to keep up with the rapid transformation There is no doubt that this calls for a change in university training to avoid students graduating at an already obsolete level

*Integral Equation Methods for Electromagnetic and Elastic Waves* Weng Chew, Mei-Song Tong, Bin HU, 2022-05-31 *Integral Equation Methods for Electromagnetic and Elastic Waves* is an outgrowth of several years of work There have been no recent books on integral equation methods There are books written on integral equations but either they have been around for a while or they were written by mathematicians Much of the knowledge in integral equation methods still resides in journal papers With this book important relevant knowledge for integral equations are consolidated in one place and researchers need only read the pertinent chapters in this book to gain important knowledge needed for integral equation research Also learning the

fundamentals of linear elastic wave theory does not require a quantum leap for electromagnetic practitioners Integral equation methods have been around for several decades and their introduction to electromagnetics has been due to the seminal works of Richmond and Harrington in the 1960s There was a surge in the interest in this topic in the 1980s notably the work of Wilton and his coworkers due to increased computing power The interest in this area was on the wane when it was demonstrated that differential equation methods with their sparse matrices can solve many problems more efficiently than integral equation methods Recently due to the advent of fast algorithms there has been a revival in integral equation methods in electromagnetics Much of our work in recent years has been in fast algorithms for integral equations which prompted our interest in integral equation methods While previously only tens of thousands of unknowns could be solved by integral equation methods now tens of millions of unknowns can be solved with fast algorithms This has prompted new enthusiasm in integral equation methods
