A red umbrella is shown tilted to the right, with rain falling around it. The umbrella's surface is marked with a coordinate system. A horizontal dashed line represents the horizontal direction. The angle between this line and the line of the umbrella's shaft is labeled α . The angle between the horizontal dashed line and the line of the umbrella's canopy is labeled β . The differential equation $dp/dt = -mg$ is written on the left side of the umbrella's canopy.

$dp/dt = -mg$

Constructivist Education in an Age of Accountability David W. Kritt, 2018-01-16 This book contrasts authentic approaches to education with classroom practices based primarily on standards external to the individuals who are supposed to learn While other books tend to promote either a desperate scramble for meeting standards or determined resistance to neoliberal reforms this book fills that gap in ways that will inspire practitioners prospective teachers and teacher educators Mandates pay only lip service to constructivist and social constructivist principles while thwarting the value of both students and teachers actively creating understandings Authors in this book assert the central importance of a range of constructivist approaches to teaching learning and thinking inviting careful reflection on the goals and values of education

Calculus 2 Simplified Oscar E. Fernandez, 2025-04 The companion to Fernandez's successful Calculus Simplified completing a full year of accessible personalized support for college calculus Calculus is both beautiful and useful Its usefulness has made it the subject of core service courses that must deliver in a limited time an extraordinary amount and range of material new fundamental concepts and abstract objects particular realizations of the new objects each with specific behavior and precise techniques of manipulation and calculation All of this is packed into courses and textbooks in a way that to students can entangle the fundamental and the particular A student who is struggling can't tell whether they aren't grasping the fundamentals or are unfamiliar with specific facts or need more practice with common techniques In this resource for students Oscar Fernandez helps them to unpick the tangle He reduces attention to the core of Calculus 2 techniques and applications of integration sequences and series and applications of integration to sequences and series This clear focus gives him the space to build intuition what's going on and why we care as motivation for the increasing load of facts and techniques As a result students gain a solid understanding of the material while recovering the beauty and power of the subject As with his previous book Calculus Simplified this clarified approach to the material is supplemented with hundreds of worked examples hundreds of exercises with answers dynamic and interactive online content and video examples and explainers
