Wolfbeis, 2013-04-17 Optical sensor technology has reached a level of technological maturity that makes it a promising candidate for applications to specific sensing challenges including those in environmental monitoring in process control particularly in biotechnology in clinical assays where low cost one way sensing elements are needed and in other areas Optical sensors can be used as fiber optic microsensors as planar coatings in bioreactors in microtiterplate format in disposable single shot devices and as planar membranes that can be imaged using sensitive cameras The spectral range extends from the UV to the infrared and from absorption to emission and to surface plasmon resonance Hence a variety of schemes are conceivable and this first volume of the Springer Series on Chemical Sensors and Biosensors gives a state of the art description of this highly sophisticated but very promising technology **Proceedings of Medical Sensors II and Fiber Optic Sensors** Anna Maria Verga Scheggi, 1995 **Optical Fiber Sensors: Components and subsystems** John Dakin, B. Culshaw, 1996 **Handbook of Optical Fibre Sensing Technology** José Miguel López-Higuera, 2002 The pursuit of more efficient telecommunications has resulted in a major research push towards communication systems that are lighter faster more reliable and cheaper This has given rise to great advances in devices and in fibre optics A spin off of this research is the development of optical sensors which use photonic materials and concepts Optical sensors have wide ranging applications in various fields including telecommunications civil engineering chemical industry biomedical applications and the electrical power industry This comprehensive handbook written by a wide spectrum of leading international researchers offers a clear understanding of the theory as well as focusing on the many practical applications throughout the industry The book is organised into four main

sections Preliminary Offers an overview of Fiber Optic Sensing Technology the applications where it can be used successfully and also serves as an overall introduction to the handbook This section also analyses current publications in the field Fundamentals of Photonics and Components for Sensing Describes the photonic concepts and components needed in order to carried out the understanding the design and to realise photonic sensor systems Principles and Techniques for Sensing Provides the principles and techniques in which the photonic sensing technology is based in order to understand how sensors work and how sensors can be made Applications An ample overview of the developments which are successfully taking place in laboratory and field trials as well as the available sensors in the current market and the future trends in this field Applications are featured throughout the text and this section focuses primarily on niche applications This handbook would prove to be a valuable reference resource for researchers engineers and postgraduate students in fibre optical sensing as well as practising engineers in optical communications and electronic engineering civil engineering aerospace industry biomedicine and robotics Distributed and Multiplexed Fiber Optic Sensors ,1993 *Development and Evaluation of a Multianalyte Optical Fiber Imaging Biosensor Platform Using Contact-based Microdispensing Technology* Rosa Margarita Alvis,2006 **Linear and Nonlinear Optics of Organic Materials** ,2004 **Proceedings of the ...
