Deadman, 1984 *The Role of Fibers in Forensic Science Examinations* MC. Grieve, 1983 The purpose of this article is to draw attention to the potential of fiber evidence and present some of the reasons why this potential appears to be currently underutilized The author has tried to summarize state of the art examination of fibers to promote interest encourage and assist those less experienced in this specialized field Fibers are the most frequently encountered type of trace evidence In comparison with other types of forensic science examinations the number of articles on fibers appearing in the relevant journals is minimal It is however increasing showing an awakening interest in the subject that has been given a boost by the findings in the Atlanta murders case which appears to be the first occasion of fibers playing a major part in obtaining a conviction in a case of such importance in the United States This article presents an overview of the subject of fiber examination ranging from the collection of evidence and some of its attendant pitfalls through basic and more advanced laboratory techniques past and present to assessing the value of fiber evidence and commenting on how this may be improved in the future Forensic Characterization of Eco-fibers Using Raman Spectroscopy Tiffany J. Millett, 2013 Fibers are an extremely important class of physical evidence often encountered in forensic science investigations The high probability of finding fibers and being able to link suspect victim and crime scene makes fiber evidence extremely valuable in a court of law Because they are so valuable in a court of law Because they are so valuable in forensic investigations much

research has been done dealing with the characterization and identification of various fibers. Recently criminalists are encountering a new class of fibers known as eco fibers. Eco fibers are those natural fibers using raw materials that are not treated with harsh chemicals and pesticides, synthetic fibers created using green chemistry, and regenerated fibers that use recycled or natural products as their main substrate. Not only are these fibers considered to be beneficial to the environment with less harmful emissions and biodegradable qualities but have also been shown to be valuable to those who use them as many of these fibers are considered hypoallergenic and resistant to mold and mildew. As the world moves toward being a greener planet, not only has the probability of coming across this class of fibers on an everyday basis risen but also the probability of encountering them in forensic casework has also increased. Forensic scientists have a huge interest in researching this new class of fibers. However, not since their development has research in differentiating such fibers been completed using Raman spectroscopy. It may be so that fibers are so commonly encountered that many of them yield no special information that can lead to individualization. It is, however, true that the mere identification of the class or subclass to which a fiber may belong may be pertinent to an investigation in order to increase the evidentiary value of the fiber evidence. This research is designed to do just that.

The Forensic Examination to Determine the Value and Validity of Textile Fiber Evidence Fredria C. Shaw, 2006

A Fiber Data Collection for Forensic Scientists--Collection and Examination Methods DK. Laing, AW. Hartshorne, R. Cook, G. Robinson, 1987

Methods used in U K forensic science laboratories to establish a large fiber data base are described including details of the recording of fiber sources, types, and colors. Such a data base provides a firm foundation for the assessment of the significance of fiber matches encountered in casework.

Forensic Evidence Darlene Stiller, 2009-07-10

Outlines the methods crime lab technicians use to collect and evaluate hair and fiber evidence to use in solving a robbery case.

Fibers Under Fire MC. Grieve, KG. Wiggins, 2001

The current emphasis on DNA technology in forensic science has led many to believe that trace evidence examinations including fibers may be of little value. Reasons are given here to show that this is an erroneous assumption. In the face of this situation, fibers examiners have been challenged to consider ways in which they can improve the services they offer to the Criminal Justice System, not only by increasing the efficiency of the examinations but also by expressing the evidential value of the findings in a clearer way. The separate stages within fibers casework, from evidence collection to report writing, are critically examined. Suggestions are made on how improvements may be achieved. Areas where particular progress can be made include improving communication and exchange of information between the investigator and the scientist and streamlining analysis by using the latest equipment in conjunction with effective case management. In addition, ways of making better use of existing data pertaining to fiber frequencies, accumulating new data by using the resources of working groups, and improving training procedures with respect to evidence interpretation are discussed.

Forensic Textile Fiber Examination Across the USA and Europe KG. Wiggins, 2001

Crime laboratories in the USA who undertake fiber examinations together with members of the European

Fibres Group plus representatives from Israel Japan Canada and Australia were surveyed in 1994 and 1995 respectively and asked to provide subject specific information relating to personnel equipment training quality control and techniques available The information obtained showed that generally more fiber casework is carried out in Europe than in the USA Most laboratories are quite well equipped but those in Europe seem to be able to obtain more state of the art instrumentation Proficiency testing and peer review is accepted practice worldwide Americans appear to update fiber collections on a more regular basis than Europeans but both keep literature up to date Contamination is a major issue as with all areas of trace evidence The results from the survey suggest that minimum standards are clearly not always being observed Careful consideration also needs to be given as to whether legitimate contact could have occurred prior to an offense being committed

Analytical Methods for Developing Fibers as Forensic Science Proof W. Fong,1989 A review and commentary of the principal methods for developing textile fibers as evidence are given The methods reviewed proceed from the preliminary phase of finding and handling to the subsequent phases of identification characterization and comparison The latter phase is arranged to progress from methods that require only microscopic amounts of fibers and are nondestructive to those that require progressively larger amounts of fibers and are destructive The relevant literature in the time period 1950 to 1987 is included

The Basics of Digital Forensics John Sammons,2012-04-02 The Basics of Digital Forensics provides a foundation for people new to the field of digital forensics This book teaches you how to conduct examinations by explaining what digital forensics is the methodologies used key technical concepts and the tools needed to perform examinations Details on digital forensics for computers networks cell phones GPS the cloud and Internet are discussed Readers will also learn how to collect evidence document the scene and recover deleted data This is the only resource your students need to get a jump start into digital forensics investigations This book is organized into 11 chapters After an introduction to the basics of digital forensics the book proceeds with a discussion of key technical concepts Succeeding chapters cover labs and tools collecting evidence Windows system artifacts anti forensics Internet and email network forensics and mobile device forensics The book concludes by outlining challenges and concerns associated with digital forensics PowerPoint lecture slides are also available This book will be a valuable resource for entry level digital forensics professionals as well as those in complimentary fields including law enforcement legal and general information security Learn all about what Digital Forensics entails Build a toolkit and prepare an investigative plan Understand the common artifacts to look for during an exam

A New Approach to the Microscopical Examination and Comparison of Synthetic Fibers Encountered in Forensic Science Cases N. Petraco,PR. DeForest,Harris (H.),1980 This paper describes a refined approach to the problems of identification and comparison of synthetic fibers encountered in forensic science case work The necessary apparatus consists of a polarizing microscope equipped with a Mettler hot stage Observations concerning the variation of a fiber s birefringence with temperature have been found to be very useful both for determining

the generic type of an unknown fiber and for detecting subtle differences among fibers of the same generic type from different sources Data including semilogarithmic plots of birefringence as a function of temperature are given for nine different generic types of synthetic fibers Forensic Significance of Teal Colored Cashmere and Black Acrylic Fibers
Nicole M. Martin,2015 Textile fibers are a valuable type of trace evidence within forensic cases They have the ability to connect a perpetrator to a victim and or a crime scene Some types of fibers are more prevalent than others The purpose of this research was to conduct a target fiber study in order to determine the significance of the selected fibers in a forensic case Two fibers were selected from two different garments black acrylic fiber and a teal colored cashmere fiber Unknown fibers were collected from three local clothing stores and counted Using light microscopy all 20 164 fibers were eliminated as a potential match to the black acrylic target fiber Microscopic comparison of the unknown fibers to the teal colored cashmere target fiber produced two potential matches which were further eliminated by microspectrophotometric analysis Therefore of the 20 164 unknown fibers comparison to both target fibers resulted in no potential matches It can be concluded that these target fibers may have potential forensic evidential value within a criminal case in the Erie County area **Standard Guide for Forensic Analysis of Fibers by Infrared Spectroscopy , Social Media Investigation for Law Enforcement**
