## **Earthmasters The Dawn Of The Age Of Climate Engineering:**

**Earthmasters** Clive Hamilton, 2013-04-22 Looks at the effects climate change will have on Earth by the end of this century focusing on a collaboration between scientists and big business to develop advances in geoengineering so that humans can fight global warming *The Ethics of "Geoengineering" the Global Climate* Stephen M. Gardiner, Catriona McKinnon, Augustin Fragnière, 2020-09-10 In the face of limited time and escalating impacts some scientists and politicians are talking about attempting grand technological interventions into the Earth's basic physical and biological systems geoengineering to combat global warming Early ideas include spraying particles into the stratosphere to block some incoming sunlight or enhancing natural biological systems to withdraw carbon dioxide from the atmosphere at a higher rate Such technologies are highly speculative and scientific development of them has barely begun Nevertheless it is widely recognized that geoengineering raises critical questions about who will control planetary interventions and what responsibilities they will have Central to these questions are issues of justice and political legitimacy For instance while some claim that climate risks are so severe that geoengineering must be attempted others insist that the current global order is so unjust that interventions are highly likely to be illegitimate and exacerbate injustice Such concerns are rarely discussed in the policy arena in any depth or with academic rigor Hence this book gathers contributions from leading voices and rising stars in political philosophy to respond It is essential reading for anyone puzzled about how geoengineering might promote or thwart the ends of justice in a dramatically changing world The chapters in this book were originally published in the journals *Ethics Policy the Environment and Critical Review of International Social and Political Philosophy* [The Climate of History in a Planetary Age](#) Dipesh Chakrabarty, 2024-05-31 For the past decade historian Dipesh Chakrabarty has been one of the most influential scholars addressing the meaning of climate change Climate change he argues upends long standing ideas of history modernity and globalization The burden of *The Climate of History in a Planetary Age* is to grapple with what this means and to confront humanities scholars with ideas they have been reluctant to reconsider from the changed nature of human agency to a new acceptance of universals Chakrabarty argues that we must see ourselves from two perspectives at once the planetary and the global This distinction is central to Chakrabarty's work the globe is a human centric construction while a planetary perspective intentionally decenters the human Featuring wide ranging excursions into historical and philosophical literatures *The Climate of History in a Planetary Age* boldly considers how to frame the human condition in troubled times As we open ourselves to the implications of the Anthropocene few writers are as likely as Chakrabarty to shape our understanding of the best way forward **Climate: A Very Short Introduction** Mark Maslin, 2013-06-27 In this *Very Short Introduction* Mark Maslin looks at all aspects of climate from the physical and chemical factors that drive it and how climate differs from weather to how climate has affected human settlements and the cyclic features of it He ends with a look at climate change and our current approaches to solving it [Climate Change 2014: Mitigation of Climate Change](#)

Ottmar Edenhofer,2015-01-26 This latest Fifth Assessment Report of the IPCC will again form the standard reference for all those concerned with climate change and its consequences      Moral Challenges in a Pandemic Age Evandro

Barbosa,2023-07-06 The COVID 19 pandemic whose consequences will be felt in the long term can be interpreted as a signal that we have been living in a pandemic age A pandemic is humanity s common ground so the moral problems inherent in it are of interest to everyone from now on It brought a set of moral challenges that cannot be ignored This book which emerged amid the novel coronavirus crisis is designed to fill the gap in the current literature on the topic offering an original approach to its moral implications It can be taken as a guide in the face of these pandemic age challenges for human relations The pandemic is a multifaceted phenomenon and its debate involves a wide variety of practical philosophical concerns All the chapters of this book divided into four sections aim to clarify its central aspects while each chapter provides an original approach to the debate s leading issues and relies on each most significant collaborator s expertise Also they reflect their unique pandemic experiences under the scrutiny of philosophical unrest Since the pandemic is an ongoing event Moral Challenges in a Pandemic Age will be of interest to professors students and researchers engaged in understanding the ethical dimension of the age we are experiencing The problems addressed in this collection transcend the boundaries of the philosophical field offering an innovative approach to individuals keen on discussing the pandemic from a moral point of view Such a discussion encompasses the philosophical inquiry but is not restricted to it Those interested in related areas such as psychology sociology biology public health education anthropology and cultural studies to name a few will find connections with parallel themes in this book In addition the collection brings a theoretically supported approach to several related debates in a language accessible to anyone who wants to know more about the topic      **Climate Change 2014: Mitigation**

**of Climate Change** Intergovernmental Panel on Climate Change,2015-01-26 This latest Fifth Assessment Report of the Intergovernmental Panel on Climate Change IPCC will again form the standard reference for all those concerned with climate change and its consequences including students researchers and policy makers in environmental science meteorology climatology biology ecology atmospheric chemistry and environmental policy      **Environmental Reflections**

**on the Anthropocene** Gabriel R. Ricci,2024-11-07 Incorporating the intellectual history of disciplines from across the humanities including environmental anthropology philosophy ethics literature history science and technology studies this volume provides a select orientation to the experience of nature from the ancient world to the Anthropocene Taking its momentum from the emerging environmental humanities this collection integrates Western Indigenous postcolonial feminist and eco spiritual perspectives that address pressing environmental concerns and reimagine the place of humans within the natural world Across thirteen chapters the contributors discuss the blending of environmental concerns with political and moral questions and encourage collaborative methods across disciplines to address dialectical tensions between culture and nature They draw on a wide range of critical perspectives provide a historical framework and speak to global environmental

pressures from multiple standpoints The global approach adopted throughout highlights the various realities of the growing ecological crisis experienced across the world Written to appeal to a broad range of readers across the environmental humanities this edited book will be particularly useful to academics scholars and researchers in philosophy anthropology literature history and critical theory [Minnesota Law Review](#), 2015 **The Ethics of Generating Posthumans** Calum MacKellar, Trevor Stammers, 2022-01-27 Should transhuman and posthuman persons ever be brought into existence And if so could they be generated in a good and loving way This study explores how society may respond to the actual generation of new kinds of persons from ethical philosophical and theological perspectives Contributors to this volume address a number of essential questions including the ethical ramifications of generating new life the relationships that generators may have with their creations and how these creations may consider their generation This collection s interdisciplinary approach traverses the philosophical writings of Aristotle Aquinas Kant Nietzsche and Heidegger alongside theological considerations from Jewish Christian and Islamic traditions It invites academics faith leaders policy makers and stakeholders to think through the ethical gamut of generating posthuman and transhuman persons **Defiant Earth** Clive Hamilton, 2017-06-05 Humans have become so powerful that we have disrupted the functioning of the Earth System as a whole bringing on a new geological epoch the Anthropocene one in which the serene and clement conditions that allowed civilisation to flourish are disappearing and we quail before the wakened giant The emergence of a conscious creature capable of using technology to bring about a rupture in the Earth s geochronology is an event of monumental significance on a par with the arrival of civilisation itself What does it mean to have arrived at this point where human history and Earth history collide Some interpret the Anthropocene as no more than a development of what they already know obscuring and deflating its profound significance But the Anthropocene demands that we rethink everything The modern belief in the free reflexive being making its own future by taking control of its environment even to the point of geoengineering is now impossible because we have rendered the Earth more unpredictable and less controllable a disobedient planet At the same time all attempts by progressives to cut humans down to size by attacking anthropocentrism come up against the insurmountable fact that human beings now possess enough power to change the Earth s course It s too late to turn back the geological clock and there is no going back to premodern ways of thinking We must face the fact that humans are at the centre of the world even if we must give the idea that we can control the planet These truths call for a new kind of anthropocentrism a philosophy by which we might use our power responsibly and find a way to live on a defiant Earth *Desert Edens* Philipp Lehmann, 2022-10-25 How technological advances and colonial fears inspired utopian geoengineering projects during the late nineteenth and early twentieth centuries From the 1870s to the mid twentieth century European explorers climatologists colonial officials and planners were avidly interested in large scale projects that might actively alter the climate Uncovering this history *Desert Edens* looks at how arid environments and an increasing anxiety about climate in the colonial world shaped this upsurge in ideas about

climate engineering From notions about the transformation of deserts into forests to Nazi plans to influence the climates of war torn areas Philipp Lehmann puts the early climate change debate in its environmental intellectual and political context and considers the ways this legacy reverberates in the present climate crisis Lehmann examines some of the most ambitious climate engineering projects to emerge in the late nineteenth and early twentieth centuries Confronted with the Sahara in the 1870s the French developed concepts for a flooding project that would lead to the creation of a man made Sahara Sea In the 1920s German architect Herman S rgel proposed damming the Mediterranean in order to geoengineer an Afro European continent called Atlantropa which would fit the needs of European settlers Nazi designs were formulated to counteract the desertification of Eastern Europe and Central Asia Despite ideological and technical differences these projects all incorporated and developed climate change theories and vocabulary They also combined expressions of an extreme environmental pessimism with a powerful technological optimism that continue to shape the contemporary moment Focusing on the intellectual roots intended effects and impact of early measures to modify the climate Desert Edens investigates how the technological imagination can be inspired by pressing fears about the environment and civilization The Planet Remade Oliver Morton, 2015-11-03 First published in Great Britain by Granta Books 2015
