Earthquakes Tsunamis And Nuclear Risks Prediction And Assessment Beyond The Fukushima Accident:

Earthquakes, Tsunamis and Nuclear Risks Katsuhiro Kamae, 2016-01-22 This book covers seismic probabilistic risk assessment S PRA and related studies which have become more important to increase the safety of nuclear facilities against earthquakes and tsunamis in the face of the many uncertainties after the Fukushima accident The topics are 1 Active faults and active tectonics important for seismic hazard assessment of nuclear facilities 2 Seismic source modeling and simulation and modeling techniques indispensable for strong ground motion prediction and 3 PRA with external hazard and risk communication The Fukushima accident has showed us the limitations of the deterministic evaluation approach to external events an earthquake and tsunami in which there are many uncertainties Furthermore public anxiety regarding nuclear safety because of an unexpected threat caused by an earthquake or tsunami is growing The current policy on the estimation of the design basis of ground motion as well as tsunami height still has not been improved following the Fukushima accident In particular the risk concept in a nuclear system regarding seismic motion and a tsunami beyond the design basis is indispensable Therefore research and development for PRA enhancing nuclear safety are being actively pursued not only in Japan but also worldwide This book provides an opportunity for readers to consider the future direction of nuclear safety vis vis natural disasters

Resilience: A New Paradigm of Nuclear Safety Joonhong Ahn, Franck Guarnieri, Kazuo Furuta, 2017-08-15 This book is published open access under a CC BY 4.0 license This book summarizes presentations and discussions from the two day international workshop held at UC Berkeley in March 2015 and derives questions to be addressed in multi disciplinary research toward a new paradigm of nuclear safety The consequences of the Fukushima Daiichi nuclear accident in March 2011 have fuelled the debate on nuclear safety while there were no casualties due to radiation there was substantial damage to local communities The lack of common understanding of the basics of environmental and radiological sciences has made it difficult for stakeholders to develop effective strategies to accelerate recovery and this is compounded by a lack of effective decision making due to the eroded public trust in the government and operators Recognizing that making a society resilient and achieving higher levels of safety relies on public participation in and feedback on decision making the book focuses on risk perception and mitigation in its discussion of the development of resilient communities

Subcommittee on Investigations and Oversight, 2011 **Correlation Between Human Factors and the Prevention of Disasters** Wilhelm G. Coldewey, Dieter W.G. Reimer, Dmytro V. Rudakov, 2012-05-15 The nuclear disaster at the Chernobyl power plant devastating floods landslides droughts the erosion of tailings dams and desertification are just some of the natural and manmade disasters which have afflicted the Ukraine and neighboring countries in recent years It is therefore entirely appropriate that the NATO Advanced Research Workshop ARW Correlation between Human Factors and the Prevention of Catastrophes was held in Dnipropetrovsk Ukraine in September 2011 This book presents the proceedings of the ARW which analyzed accumulated European theoretical knowledge and practical experience in the field of disaster prevention addressing a wide range of

correlations between human factors and the prevention of catastrophes Subjects covered include land use planning and management procedures risk assessment in emergency situations control of polluted water socio economic impacts from desertification health impacts arising from nuclear facilities flooding and tailings dam accidents risk management systems and measures and the protection of water resources The presentations reflected the extensive experience of workshop participants and will be of great interest especially to countries that are developing their legal frameworks in civil emergency planning most particularly those who are aligning to EU directives and other international standards Parameter

Estimation and Uncertainty Quantification in Water Resources Modeling Philippe Renard, Frederick Delay, Daniel M.

Tartakovsky, Velimir V. Vesselinov, 2020-04-22 Numerical models of flow and transport processes are heavily employed in the fields of surface soil and groundwater hydrology They are used to interpret field observations analyze complex and coupled processes or to support decision making related to large societal issues such as the water energy nexus or sustainable water management and food production Parameter estimation and uncertainty quantification are two key features of modern science based predictions When applied to water resources these tasks must cope with many degrees of freedom and large datasets Both are challenging and require novel theoretical and computational approaches to handle complex models with large number of unknown parameters

Fukushima David Lochbaum, Edwin Lyman, Susan Q. Fukushima Disaster Mitsuo Yamakawa, Daisaku Yamamoto, 2016-11-10 The Fukushima disaster continues to appear in national newspapers when there is another leakage of radiation contaminated water evacuation designations are changed or major compensation issues arise and so remains far from over However after five years attention and research towards the disaster seems to have waned despite the extent and significance of the disaster that remains The aftermath of Fukushima exposed a number of shortcomings in nuclear energy policy and disaster preparedness This book gives an account of the municipal responses citizen s responses and coping attempts before during and after the Fukushima crisis It focuses on the background of the Fukushima disaster from the Tohoku earthquake to diffusion on radioactive material and risk miscommunication It explores the processes and politics of radiation contamination and the conditions and challenges that the disaster evacuees have faced reflecting on the evacuation process evacuation zoning and hope in a post Fukushima environment The book will be of great interest to students and scholars of disaster management studies and nuclear policy

Learning from Megadisasters Federica Ranghieri, Mikio Ishiwatari, 2014-06-26 The successes of Japan s disaster risk management DRM system as well as the ways in which that system could be improved are reflected in the lessons drawn from the Great East Japan Earthquake GEJE and presented in the initial reports from the Learning from Megadisasters project The GEJE was the first disaster ever recorded that included an earthquake a tsunami a nuclear power plant accident

a power supply failure and a large scale disruption of supply chains Extreme disasters underscore the need for a holistic approach to DRM Single sector development planning cannot address the complexity of problems posed by natural hazards let alone megadisasters nor can such planning build resilience to threats Faced with complex risks Japan chose to build resilience by investing in preventative structural and nonstructural measures nurturing a strong culture of knowledge and learning from past disasters engaging in wise DRM regulation legislation and enforcement and promoting cooperation among multiple stakeholders between government agencies and ministries between the private sector and the government and among multiple levels of governance from local to national to international The book consolidates a set of 36 Knowledge Notes research results of a joint study undertaken by the Government of Japan and the World Bank These notes highlight key lessons learned in seven DRM thematic clusters structural measures nonstructural measures emergency response reconstruction planning hazard and risk information and decision making the economics of disaster risk risk management and risk financing and recovery and relocation Aimed at sharing Japanese cutting edge knowledge with practitioners and decision makers this book provides valuable guidance to other disaster prone countries for mainstreaming DRM in their development policies and weathering their own natural disasters

The Fukushima Daiichi Nuclear Power Station Disaster The Independent Investigation Fukushima Nuclear Accident, 2014-03-05 When the Nuclear Safety Commission in Japan reviewed safety design guidelines for nuclear plants in 1990 the regulatory agency explicitly ruled out the need to consider prolonged AC power loss In other words nothing like the catastrophe at the Fukushima Daiichi Nuclear Power Station was possible no tsunami of 45 feet could swamp a nuclear power station and knock out its emergency systems No blackout could last for days No triple meltdown could occur Nothing like this could ever happen Until it did over the course of a week in March 2011 In this volume and in gripping detail the Independent Investigation Commission on the Fukushima Nuclear Accident a civilian led group presents a thorough and powerful account of what happened within hours and days after this nuclear disaster the second worst in history It documents the findings of a working group of more than thirty people including natural scientists and engineers social scientists and researchers business people lawyers and journalists who researched this crisis involving multiple simultaneous dangers They conducted over 300 investigative interviews to collect testimony from relevant individuals The responsibility of this committee was to act as an external ombudsman summarizing its conclusions in the form of an original report published in Japanese in February 2012 This has now been substantially rewritten and revised for this English language edition The work reveals the truth behind the tragic saga of the multiple catastrophic accidents at the Fukushima Daiichi Nuclear Power Station It serves as a valuable and essential historical reference which will help to inform and guide future nuclear safety and policy in both Japan and internationally
