**Sports Kinanthropometry: An Approach To Enhancing Sports Performance** Dr. Sanjay Kumar Prajapati, Dr. Sanjeev S. Patil, Kinanthropometry as an approach to enhancing sports performance is the scientific study of human body size, shape, composition and proportions in relation to movement and athletic ability. By measuring variables such as height, limb length, girths, skinfold thickness and body composition, kinanthropometry helps identify an athlete's physical suitability for specific sports, informs talent identification and guides the design of training programs tailored to individual body types. Different sports favor different body types, e.g., tall and long limbed for basketball, lean for endurance running. Guides development of personalized training programs aligned with an athlete's physical attributes. Tracks changes in body composition, proportions and physical growth to optimize performance. Ensures techniques, training and equipment are suited to an athlete's body. Focuses on athlete-centered assessment rather than reducing athletes to mere numbers.
