Economics Of Industrial Ecology Materials Structural Change And Spatial Scales:

Economics of Industrial Ecology Jeroen C. J. M. van den Bergh, Marco Janssen, 2004 Studies that integrate scientific technological and economic dimensions of industrial ecology and material flows The use of economic modeling techniques in industrial ecology research provides distinct advantages over the customary approach which focuses on the physical description of material flows The thirteen chapters of Economics of Industrial Ecology integrate the natural science and technological dimensions of industrial ecology with a rigorous economic approach and by doing so contribute to the advancement of this emerging field Using a variety of modeling techniques including econometric partial and general equilibrium and input output models and applying them to a wide range of materials economic sectors and countries these studies analyze the driving forces behind material flows and structural changes in order to offer guidance for economically and socially feasible policy solutions After a survey of concepts and relevant research that provides a useful background for the chapters that follow the book presents historical analyses of structural change from statistical and decomposition approaches a range of models that predict structural change on the national and regional scale under different policy scenarios two models that can be used to analyze waste management and recycling operations and adopting the perspective of local scale an analysis of the dynamics of eco industrial parks in Denmark and the Netherlands The book concludes with a discussion of the policy implications of an economic approach to industrial ecology

The Dynamics of Regions and Networks in Industrial Ecosystems Matthias Ruth, Brynhildur Davidsdottir, 2009-01-01 Industrial ecology provides a rigorous and comprehensive description of human production and consumption processes in the larger context of environmental and socioeconomic change This volume offers methodologies for such descriptions with contributions covering both basic and advanced analytical concepts and tools to explore the dynamics of industrial ecosystems concentrating specifically on regions and networks Each of the book s three parts contains an introduction by a leader in the field as well as chapters ranging from conceptual models to case study applications The first part offers an introduction to the main themes and issues surrounding regional and networked industrial ecosystems The subsequent two parts broaden and deepen the discussion with emphasis on the regional and network characters relevant for analysis and management The scale of issues ranges from buildings to regions to entire nations with methods that range from input output analysis to computer assisted simulation games Researchers in the fields of industrial ecology ecological economics environmental and energy policy environmental engineering and resource and environmental economics will find this comprehensive book of great interest

Regional Development: Theory and Practice Baleshwar Thakur, H.S. Sharma, Suresh Misra, S. Chattopadhyay, Surendra Singh, 2017-01-01 The Five Volume Series on Regional Development Theory and Practice is a festschrift dedicated to Professor R P Misra a distinguished scholar widely recognized as one of the pioneers who initiated and promoted Regional Planning studies in India This five volume series with over one hundred research papers on different aspects of regional

development is a fitting tribute to the scholar who spent much of his life time thinking researching and writing about development in general and regional development in particular These five volumes each dealing with a specific aspect of regional development Vol 1 Concept of Regional Development Vol 2 Measuring Development Vol 3 Development Patterns and Structures Vol 4 Development Policies and Vol 5 Development Challenges Each of the five volumes begins with an introduction which is unique in the sense that this is not merely an introduction to the contributions contained in the volume but also talks of the theory of regional development contemporary development in the discipline and the contrarian views expressed by various academics and policy makers Another significant aspect of these introductions is the global view and a comparative scenario of the developed developing and under developed economies of the world that the editors have kept in view in a debate seeking an universal theory of regional development Regions are specifics and often unique and regional development implies focusing on the assets of the territory its potential and constraints

Sustainability Indicators Tomás Hák,Bedrich Moldan,Arthur Lyon Dahl,2007-05-14 While the concept of sustainability has been widely embraced it has been only vaguely defined and is exceedingly difficult to measure Sustainability indicators are critical to making the broad concept of sustainability operational by providing specific measures by which decision makers and the public can judge progress Sustainability Indicators defines the present state of the art in indicator development It presents a comprehensive assessment of the science behind various indicators while placing special emphasis on their use as communications tools The contributors draw on their experience as academics and practitioners to describe the conceptual challenges to measuring something as complex as sustainability at local regional national and global scales The book also reviews existing indicators to assess how they could be better employed considering which indicators are overused and which have been underutilized Sustainability Indicators will help planners and policy makers find indicators that are ready

for application and relevant to their needs and will help researchers identify the unresolved issues where progress is most urgently needed All readers will find advice as to the most effective ways to use indicators to support decision making

Journal of Economic Literature ,2005 *The Dematerialization Potential of the Australian Economy* Heinz Schandl,2008 In this paper we test the long term dematerialization potential for Australia in terms of materials energy and water use as well as CO2 emissions by introducing concrete targets for major sectors Major improvements in the construction and housing transport and mobility and food and nutrition sectors in the Australian economy if coupled with significant reductions in the resource export sectors would substantially improve the current material energy and emission intensive pattern of Australia s production and consumption system Using the Australian Stocks and Flows framework we model all system interactions to understand the contributions of large scale changes in technology infrastructure and lifestyle to decoupling the economy from the environment The modelling shows a considerable reduction in natural resource use while energy and water use decrease to a much lesser extent because a reduction in natural resource consumption creates a trade off in energy use It also shows that trade and economic growth may continue but at a reduced rate compared with a business as usual scenario The findings of our modelling are discussed in light of the large body of literature on dematerialization eco efficiency and rebound effects that may occur when efficiency is increased We argue that Australia cannot rely on incremental efficiency gains but has to undergo a sustainability transition to achieve a low carbon future to keep in line with the international effort to avoid climate change and resource use conflicts We touch upon the institutional changes that would be required to guide a sustainability transition in the Australian economy such as for instance an emission trading scheme Authors abstract *Land Economics* ,1948 **Academy of Management Annual Meeting** Academy of Management,2005 **American Book Publishing Record** ,2003 **Choice** ,2004
