Economics--Mathematical Politics or Science of Diminishing Returns? Alexander Rosenberg,1992-10-01 Economics today cannot predict the likely outcome of specific events any better than it could in the time of Adam Smith This is Alexander Rosenberg s controversial challenge to the scientific status of economics Rosenberg explains that the defining characteristic of any science is predictive improvability the capacity to create more precise forecasts by evaluating the success of earlier predictions and he forcefully argues that because economics has not been able to increase its predictive power for over two centuries it is not a science *Economics--Mathematical Politics Or Science of Diminishing Returns?* Alexander Rosenberg,1992 Economics will never be able to move beyond these vague predictions because it treats human behavior individual and social as the product of expectations and preferences beliefs and desires the variables that cannot be measured independently of the actual choices we want to predict These factors combined with the economist s commitment to the search for equilibrium solutions to theoretical problems condemn economic theory to permanent predictive weakness In the end Rosenberg s analysis is not merely a critique His aim is to redefine the scope and value of neoclassical theory suggesting that its character and most important accomplishments need to be correctly understood to defend economics against the charge that it is a science of diminishing returns BOOK JACKET **Frank Knight's Review of Alexander**
