

TUNING TIPS - ADVANCED

Occasionally, best performance may fall somewhere between the curves programmed into the ignition. By rotating the module clockwise (advanced) or counter-clockwise (retarded), the entire curve will be shifted up or down. Be aware that if you advance the ignition, your final timing will be increased. Excessive advance may cause pinging and hard starting, so only turn the ignition one or two degrees at a time and note any changes to the motor.

For racing applications, the advance can be set to always come in quickly by using NORMAL VOES mode and permanently connecting the violet wire to ground. These curves are similar to what is generated by a mechanical advancer.
