*Static and Dynamic Finite Element Analysis Using Parallel Programming on GPU with OpenCL* 2014      *Static and Dynamic Finite Element Analysis Using Parallel Programming* Allan Mann, 2015-11-25 The Graphics Processing Units GPU were originally designed for downloading graphical display but with the improved capabilities of GPU the use of GPU for General Purpose Programming GPGPU has been noticed Due to the parallel architecture which allows the concurrency of the tasks GPU can be used for solving large systems of equations Implementation of the Finite Element Method on GPU architecture is quite straightforward because this method deals with linear equations or ordinary differential equations and when a problem has a large number of degrees of freedom the use of GPU capabilities can significantly decrease the computation time Two specific examples are the transient analysis and the static analysis which can reach higher performance using parallel programming      **Seismic Safety of High Arch Dams** Houqun Chen, Shengxin Wu, Faning Dang, 2015-11-10 Written for civil structural and geotechnical engineers this book presents the latest research and practical experience in the design of high arch dams in seismically active regions from an author team that is highly active and experienced in the design development and construction of 300m high arch dams The book covers the entire subject of dam design for seismic regions including seismic input mechanisms and modeling non linear analysis techniques for dam structure and foundations concrete material properties and simulation techniques for dam design Of particular value are the real world experimental data and design case studies that enhance the book and ensure that readers can apply the theoretical content to their own projects Break through the conventional concepts in civil engineering discipline and focus on applying new techniques from other subject fields to seismic safety on high arch dam design in an innovative way Shows how to model and evaluate seismic safety of dams using seismic input dam response and dynamic resistance Summarizes the methodology and approaches applied to high arch dam design and construction in China demonstrates the selection of site specific seismic input parameters and enables the reader to apply this to their own specific design challenge      *Proceedings of the International Conference on Control and Information* 1995 Wing Shing Wong, 1995-06-22      Scientific and Technical Aerospace Reports ,1994      **The Shock and Vibration Digest** ,1989      **Parallel Computational Methods for Large-scale Structural Analysis and Design** ,1994      *Parallel Computing* Paul C. Messina, Almerico Murli, 1992 This book covers the key topic areas of parallel computer architectures operating systems and software environments algorithms and their implementations mathematical software and large scale scientific applications Contained are the papers from contributed talks and poster sessions presented at the conference held in Capri Italy in June 1990 The goals of the conference reflected in this proceedings were to assess the progress made in the 1980 s in parallel computation for scientific applications and to examine trends in large scale computation as we enter the 1990 s      Frontiers of Rock Mechanics and Sustainable Development in the 21st Century Wang Sijing, Fu Bingjun, Li Zhonkui, 2001-01-01 These proceedings contain the

scientific contributions presented at the 2nd Asian Rock Mechanics Symposium ISRM 2001 2nd ARMS The theme of the symposium was Frontiers of Rock Mechanics and Sustainable Development in the 21st Century *Nonlinear Engineering Computations* ,1991 **Dissertation Abstracts International** ,2005 Multiprocessors in Computational Mechanics Charbel Farhat,1987 **Parallel Computing in Optimization** A. Migdalas,Panos M. Pardalos,Sverre Storøy,1997-05-31 During the last three decades breakthroughs in computer technology have made a tremendous impact on optimization In particular parallel computing has made it possible to solve larger and computationally more difficult problems The book covers recent developments in novel programming and algorithmic aspects of parallel computing as well as technical advances in parallel optimization Each contribution is essentially expository in nature but of scholarly treatment In addition each chapter includes a collection of carefully selected problems The first two chapters discuss theoretical models for parallel algorithm design and their complexity The next chapter gives the perspective of the programmer practicing parallel algorithm development on real world platforms Solving systems of linear equations efficiently is of great importance not only because they arise in many scientific and engineering applications but also because algorithms for solving many optimization problems need to call system solvers and subroutines chapters four and five Chapters six through thirteen are dedicated to optimization problems and methods They include parallel algorithms for network problems parallel branch and bound techniques parallel heuristics for discrete and continuous problems decomposition methods parallel algorithms for variational inequality problems parallel algorithms for stochastic programming and neural networks Audience Parallel Computing in Optimization is addressed not only to researchers of mathematical programming but to all scientists in various disciplines who use optimization methods in parallel and multiprocessing environments to model and solve problems

Smith,Li Zhang,Chuan-Tao Wang,Ming F. Shi,Jeong-Whan Yoon,Thomas B. Stoughton,Jian Cao,Farhang Pourboghrat,2005-08-19 The Numisheet Conferences occur once every three years alternating in location between North America Europe and Asia The conference attracts international participation from the metal forming industry and university professors interested in sheet metal forming technology with a strong emphasis on forming

simulation Although the conference is dominated by the automotive industry the conference has a wider appeal drawing contributions from the aircraft and canning industries as well The Numisheet Conference Proceedings include the latest developments in metal forming technology which is a rapidly growing and challenging opportunity for application of science to industry The developments are described in over 125 papers included in Part A of the proceedings In addition this volume includes the Numisheet Keynote Program which focused on cutting areas of technology and was presented by selected leading scientists in the field of metal forming One of the hallmarks of the conference is the Numisheet Benchmark Study which is a set of three blind tests prepared one year prior to the conference Participants are invited to submit their predictions of how selected types of sheet metal will deform under large plastic deformation during the manufacture of actual automotive products and laboratory test specimens The complete specifications and results of this blind test are described in Part B of the proceedings     Government Reports Announcements & Index ,1988
