The Evolution of Hominin Diets Jean-Jacques Hublin, Michael P. Richards, 2009-05-15 Michael P Richards and Jean Jacques Hublin The study of hominin diets and especially how they have primates modern humans 2 faunal and plant studies 3 evolved throughout time has long been a core research archaeology and paleoanthropology and 4 isotopic studies area in archaeology and paleoanthropology but it is also This volume therefore presents research articles by most of becoming an important research area in other fields such as these participants that are mainly based on their presentations primatology nutrition science and evolutionary medicine at the symposium As can hopefully be seen in the volume Although this is a fundamental research topic much of the these papers provide important reviews of the current research research continues to be undertaken by specialists and there in these areas as well as often present new research on dietary is with some notable exceptions e g Stanford and Bunn evolution 2001 Ungar and Teaford 2002 Ungar 2007 relatively lit In the section on modern studies Hohmann provides a tle interaction with other researchers in other fields This is review of the diets of non human primates including an unfortunate as recently it has appeared that different lines interesting discussion of the role of food sharing amongst of evidence are causing similar conclusions about the major these primates Snodgrass Leonard and Roberston provide issues of hominid dietary evolution i e

Evolution of the Human Diet Peter S. Ungar, 2006-10-26 We are interested in the evolution of hominin diets for several reasons One is the fundamental concern over our present day eating habits and the consequences of our societal choices such as obesity prevalent in some cultures and starvation in others Another is that humans have learned to feed themselves in extremely varied environments and these adaptations which are fundamentally different from those of our closest biological relatives have to have had historical roots of varying depth The third and the reason why most paleoanthropologists are interested in this question is that a species trophic level and feeding adaptations can have a strong effect on body size locomotion life history strategies geographic range habitat choice and social behavior Diet is key to understanding the ecology and evolution of our distant ancestors and their kin the early hominins A study of the range of foods eaten by our progenitors underscores just how unhealthy many of our diets are today This volume brings together authorities from disparate fields to offer new insights into the diets of our ancestors Paleontologists archaeologists primatologists nutritionists and other researchers all contribute pieces to the puzzle This volume has at its core four main sections Reconstructed diets based on hominin fossils tooth size shape structure wear and chemistry mandibular biomechanics Archaeological evidence of subsistence stone tools and modified bones Models of early hominin diets based on the diets of living primates both human and non human paleoecology and energetics Nutritional analyses and their implications for evolutionary medicine New techniques for gleaning information from fossil teeth bones and stone tools new theories stemming from studies of paleoecology and new models coming from analogy with modern humans and other primates all contribute to our understanding When these approaches are brought together they offer an

impressive glimpse into the lives of our distant ancestors The contributions in this volume explore the frontiers of our knowledge in each of these disciplines as they address the knowns the unknowns and the unknowables of the evolution of hominin diets *Food and Human Evolution* Berman Hudson,2021-10-01 Food has played a major role in human evolution The fact that we stand upright that we can talk that we have big brains even traits such as altruism and a sense of fairness all of these can be attributed largely to the kinds of food our ancestors ate and how they acquired it When our hominid ancestors learned to make stone weapons it enabling them to kill and butcher large animals Eating and sharing meat led to our big brains and our Machiavellian intelligence We now face a modern food related crisis About 100 years ago people began to abandon traditional diets in favor of refined pre packaged factory made foods If you list the top ten crops receiving agricultural subsidies from USDA no fruit or vegetable makes the list This book describes how the rise of industrial food production unleashed an epidemic of metabolic disease that now threatens the very future of our species America is being divided into two distinct populations an obese majority that is subject to disease and early death and a minority that remains largely free of these diseases Diet induced metabolic disease is beginning to pass directly from mothers to their children Because of this inter generational amplification an evolutionary crisis is looming This book offers a tantalizing range of information and ideas for readers interested in nutrition anthropology prehistoric studies and human evolution and food diet and human health as viewed from an overtly evolutionary perspective **Evolution of the Human Diet** Peter S. Ungar,2023 We are interested in the evolution of hominin diets for several reasons Diet is key to understanding the ecology and evolution of our distant ancestors and their kin the early hominins This volume with four main sections brings together authorities from disparate fields to offer insights into the diets of our ancestors **Human Diet** Peter S. Ungar,Mark F. Teafor,2002-03-30 Diet is key to understanding the past present and future of our species Much of human evolutionary success can be attributed to our ability to consume a wide range of foods On the other hand recent changes in the types of foods we eat may lie at the root of many of the health problems we face today To deal with these problems we must understand the evolution of the human diet Studies of traditional peoples non human primates human fossil and archaeological remains nutritional chemistry and evolutionary medicine to name just a few all contribute to our understanding of the evolution of the human diet Still as analyses become more specialized researchers become more narrowly focused and isolated This volume attempts to bring together authors schooled in a variety of academic disciplines so that we might begin to build a more cohesive view of the evolution of the human diet The book demonstrates how past diets are reconstructed using both direct analogies with living traditional peoples and non human primates and studies of the bones and teeth of fossils An understanding of our ancestral diets reveals how health relates to nutrition and conclusions can be drawn as to how we may alter our current diets to further our health
